NEW QUESTION: 1Your company uses Microsoft SharePoint Online for collaboration. A document library is configured as shown in the following table. You need to enable the coauthoring of documents in the library. What should you do? **A.** Change the Require content approval for submitted items? setting to No. **B.** Change the Who should see draft items in this document library? setting to Any user who can read items. **C.** Change the Create a version each time you edit a file in this document library? setting to No Versioning. **D.** Change the Require documents to be checked out before they can be edited? setting to No. **Answer: D**
Explanation/Reference: Explanation: The question states that coauthoring of documents in the library is required. Coauthoring means the ability of multiple people to be able to edit a document simultaneously. One way to control document collaboration is to require check-out of files, especially when multiple users have access to the library. If you have a file checked out, you can be sure that other people cannot overwrite it. However, you are also preventing other people from seeing the latest changes or making changes themselves. Do not configure your library to require checkout if people plan to co-author documents in the library. People cannot work simultaneously on documents when required check-out is turned on.

NEW QUESTION: 2There are several ways to create tables for a network. For which two of these techniques would you need to manually fill USER_SDO_NETWORK_METADATA? **A.** when you are using a manual definition: CREATE TABLE net_nodes (...); CREATE TABLE net_links (...); **B.** when you are using specific procedures: CALL SDO_NET.CREATE_NODE_TABLE(...) CALL SDO_NET.CREATE_LINK_TABLE(...) **C.** when you are using a specific procedure: CALL SDO_NET.CREATE_NETWORK(...); **D.** when you are using a specific procedure: CALL SDO_NET.CREATE_SDO_NETWORK(...); **Answer: A, B**
Explanation/Reference: If you create a network using one of the CREATE_<network-type>_NETWORK procedures, the information in these views is automatically updated to reflect the new network; otherwise, you must insert information about the network into the USER_SDO_NETWORK_METADATA view.

What is the purpose of the Servers to be added list? **A.** It contains the IP addresses used for Dynamic Discovery of targets. **B.** It contains the IP addresses of the NFS Storage Server to provide multipathing capability. **C.** It contains the IP addresses used for Static Discovery of targets. **D.** It contains the IP addresses of the ESXi hosts that mount the datastore. **Answer: B**

NEW QUESTION: 4 Vanderheiden Inc. is considering two average-risk alternative ways of producing its patented polo shirts. Process S has a cost of \$8,000 and will produce net cash flows of \$5,000 per year for 2 years. Process L will cost \$11,500 and will produce cash flows of \$4,000 per year for 4 years. The company has a contract that requires it to produce the shirts for 4 years, but the patent will expire after 4 years, so the shirts will not be produced after 4 years. Inflation is expected to be zero during the next 4 years. If cash inflows occur at the end of each year, and if Vanderheiden's cost of capital is 10 percent, by what amount will the better project increase Vanderheiden's value? **A.** \$1,237.76 **B.** \$677.69 **C.** \$1,098.89 **D.** \$1,312.31 **E.** \$1,179.46

Answer: A Explanation: Explanation/Reference: Explanation: $k = 10\%$

$S = -8,000 + \frac{5,000}{1.1} + \frac{5,000}{1.1^2} = 1,237.76$
 $L = -11,500 + \frac{4,000}{1.1} + \frac{4,000}{1.1^2} + \frac{4,000}{1.1^3} + \frac{4,000}{1.1^4} = 1,179.46$
 $IRR(S) = 16.26\%$
 $NPV(S) = 1,237.76$
 $IRR(L) = 14.66\%$
 $NPV(L) = 1,179.46$
