If the learners leave home or their companies they can't link the internet to learn our PDII test pdf.

**NEW QUESTION: 1A. Option DB. Option EC. Option AD. Option BE. Option C Answer: D**  
Explanation: The command line `javac Counter.java` will compile the code. The command line `java ea Counter` will run the code with assertions enabled. Assertion is true because `getCount(arr) = 3` and length of array is 4. The following line: `assert (getCount(arr) < arr.length);` where the Boolean expression `getCount(arr) < arr.length` will evaluate to false, will ensure that an `AssertionError` is thrown at runtime. Note: The `javac` command compiles Java source code into Java bytecodes. You then use the `Javainterpreter` - the `java` command - to interpret the Java bytecodes. Note 2: The `java` tool launches a Java application. It does this by starting a Java runtime environment, loading a specified class, and invoking that class's main method. The method declaration must look like the following: `public static void main(String args[])`  
Parameter `ea`: `-enableassertions[:<package name>"..." | :<class name> ] -ea[:<package name>"..." | :<class name> ]` Enable assertions. Assertions are disabled by default. With no arguments, `enableassertions` or `-ea` enables assertions. Note 3: An assertion is a statement in the Java™ programming language that enables you to test your assumptions about your program. Each assertion contains a boolean expression that you believe will be true when the assertion executes. If it is not true, the system will throw an error.

**NEW QUESTION: 2** In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your company has deployed several virtual machines (VMs) on-premises and to Azure. Azure Express Route has been deployed and configured for on-premises to Azure connectivity. Several VMs are exhibiting network connectivity issues. You need to analyze the network traffic to determine whether packets are being allowed or denied to the VMs. Solution: Use Azure Network Security Group analytics solution in Azure Log Analytics to analyze the network traffic. Does the solution meet the goal? **A. No B. Yes Answer: A** Explanation: Explanation/Reference: Explanation: Use the Wire Data solution in Azure Log Analytics to analyze the network traffic. Reference: <https://docs.microsoft.com/en-us/azure/log-analytics/log-analytics-wire-data>

**NEW QUESTION: 3** You have decided that you need to change the instance type of your production instances which are running as part of an AutoScaling group. The entire architecture is deployed using CloudFormation Template. You currently have 4 instances in Production. You cannot have any interruption in service and need to ensure 2 instances are always running during the update? Which of the options below listed can be used for this?**A. AutoScalingScheduledAction****B. AutoScalingReplacingUpdate****C. AutoScalingRollingUpdate****D. AutoScalingIntegrationUpdate****Answer: C****Explanation:** Explanation The AWS::AutoScaling::AutoScalingGroup resource supports an UpdatePolicy attribute. This is used to define how an Auto Scaling group resource is updated when an update to the Cloud Formation stack occurs. A common approach to updating an Auto Scaling group is to perform a rolling update, which is done by specifying the AutoScalingRollingUpdate policy. This retains the same Auto Scaling group and replaces old instances with new ones, according to the parameters specified. For more information on Autoscaling updates, please refer to the below link:\*

<https://aws.amazon.com/premiumsupport/knowledge-center/auto-scaling-group-rolling-updates/>

**NEW QUESTION: 4** An enterprise geodatabase administrator needs to enable field workers to check out and edit versioned features that participate in a topology. The field edits will be performed on laptop computers using ArcGIS Desktop with a Basic license. Which technology should the administrator recommend to store data on the field workers' laptops?**A. File geodatabase****B. Worker group geodatabase****C. PostgreSQL database****D. SQLite database****Answer: A**
