**NEW QUESTION: 1** Which two functionalities are using the FSA Agent on a Windows file server? (Select two.)  
**A.** File Blocking **B.** Mac interoperability **C.** Internet Shortcuts **D.** FSA Placeholders **E.** Retention Folders  
**Answer: A,D**

**NEW QUESTION: 2** You administer an online transaction processing (OLTP) system whose database is stored in Automatic Storage Management (ASM) and whose disk group use normal redundancy. One of the ASM disks goes offline, and is then dropped because it was not brought online before DISK\_REPAIR\_TIME elapsed. When the disk is replaced and added back to the disk group, the ensuing rebalance operation is too slow. Which two recommendations should you make to speed up the rebalance operation if this type of failure happens again? (Choose two.)  
**A.** Set the DISK\_REPAIR\_TIME disk attribute to a lower value. **B.** Increase the value of the ASM\_POWER\_LIMIT parameter. **C.** Specify the statement that adds the disk back to the disk group. **D.** Increase the number of ASMB processes. **E.** Increase the number of DBWR\_IO\_SLAVES in the ASM instance.  
**Answer: B,D**  
**Explanation:** Explanation/Reference: Explanation:  
**A:** ASM\_POWER\_LIMIT specifies the maximum power on an Automatic Storage Management instance for disk rebalancing. The higher the limit, the faster rebalancing will complete. Lower values will take longer, but consume fewer processing and I/O resources.  
**D:** Normally a separate process is fired up to do that rebalance. This will take a certain amount of time. If you want it to happen faster, fire up more processes. You tell ASM it can add more processes by increasing the rebalance power.  
**\* ASMB** ASMB Background Process Communicates with the ASM instance, managing storage and providing statistics.  
**Incorrect:** Not B: A higher, not a lower, value of DISK\_REPAIR\_TIME would be helpful here. Not E: If you implement database writer I/O slaves by setting the DBWR\_IO\_SLAVES parameter, you configure a single (master) DBWR process that has slave processes that are subservient to it. In addition, I/O slaves can be used to "simulate" asynchronous I/O on platforms that do not support asynchronous I/O or implement it inefficiently. Database I/O slaves provide non-blocking, asynchronous requests to simulate asynchronous I/O.

**NEW QUESTION: 3** A company sells a new product line. Buyers purchase a large shipment into the distribution center. The product must be divided among the retail stores equally. You need to configure buyer push functionality. Which configuration options should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.  
**Answer:** Explanation: Explanation

**NEW QUESTION: 4** What best describes the semantics modeled by the exhibit?  
**A.** The

OrderEntry component and the Invoicer component both require the services described by the Order interface and use an OrderEntry component that provides those services.**B.** OrderEntry and Invoicer are ports of OrderEntry.**C.** OrderEntry delegates to both OrderEntry and Invoicer.**D.** Signals travel from an OrderEntry port and an Invoicer port, and join into a composite signal that flows to an OrderEntry port. The signals flow along instances of the Order interface.

**Answer: A**
