**NEW QUESTION: 1** Which feature automatically disables CEF when it is enabled?  
**A.** RIB  
**B.** multicast  
**C.** IP redirects  
**D.** ACL logging  
**Answer: D**  
**Explanation:** ACL Logging means to use the "log" or "log-input" parameters at the end of the ACL statements. For example: "access-list 100 deny icmp any any echo reply log-input". In either situation, remember that using either of these two parameters disables CEF switching, which seriously impacts the performance of the router.

**NEW QUESTION: 2** Universal Containers has seven different sets of questions for its users to consider before displaying a subset of its complete product catalog for selection onto the quote. The set of applicable questions is determined by the answer to an initial question. How should the Admin set this up?  
**A.** Create one quote process and dynamically display subsequent questions depending on answers to the prior question.  
**B.** Create a picklist on the opportunity to store the initial question answer, and seven quote processes set by workflow on the quote based on this field.  
**C.** Create eight quote processes (one for the initial question, seven for the subsequent ones) and switch between the processes using a workflow rule on the quote.  
**D.** Create one product search filter that shows one of seven bundles with configuration attributes representing the values for the other questions.  
**Answer: A**

**NEW QUESTION: 3** You have been asked to install and configure a new switch in a customer network. Use the console access to the existing and new switches to configure and verify correct device configuration. You are connecting the New\_Switch to the LAN topology; the switch has been partially configured and you need to complete the rest of configuration to enable PC1 communication with PC2. Which of the configuration is correct?  
**A.** Option B  
**B.** Option E  
**C.** Option A  
**D.** Option C  
**E.** Option D  
**Answer: E**  
**Explanation:** Explanation Within any VTP, the VTP domain name must match. So, step one is to find the correct VTP name on the other switches. Logging in to SW1 and using the "show vtp status" command we see this: So we know that the VTP domain must be CCNP. This leaves only choice D and E. We also see from the topology diagram that eth 0/0 of the new switch connects to a PC in VLAN 100, so we know that this port must be an access port in VLAN 100, leaving only choice D as correct. Note that the VTP versions supported in this network are 1, 2, 3 so either VTP version 2 or 3 can be configured on the new switch.
