**NEW QUESTION: 3** Refer to the exhibit. Assuming that the peer is configured correctly and the interface is up, how many neighbors will be seen in the EIGRPv6 neighbor table on this IPv6-only router?  
**A.** one neighbor, which will use a local router-id of 6010. AB8. . /64  
**B.** none, because of the mismatch of timers  
**C.** none, because EIGRPv6 only supports authenticated peers  
**D.** one neighbor, which will use a local router-id of 6020. AB8. . /64  
**E.** none, because there is no EIGRP router ID configured  
**Answer: E**  
Explanation: Configuring EIGRP for IPv6 has some restrictions; they are listed below:  
- The interfaces can be directly configured with EIGRP for IPv6, without the use of a global IPv6 address. There is no network statement in EIGRP for IPv6.  
- The router ID needs to be configured for an EIGRPv6 protocol instance before it can run.  
- EIGRP for IPv6 has a shutdown feature. Ensure that the routing process is in "no shut" mode to start running the protocol.
