**NEW QUESTION: 1**Ann, a security analyst, has discovered that her company has very high staff turnover and often user accounts are not disabled after an employee leaves the company. Which of the following could Ann implement to help identify accounts that are still active for terminated employees?**A.** Change management**B.** Routine audits**C.** Account expirations**D.** Risk assessments**Answer: B**

**NEW QUESTION: 2**Which commands are required to configure SSH on router? (Choose two.)**A.** Configure a DHCP host for the router using dhcpname#configure terminal**B.** Configure domain name using ip domain-name command**C.** Generate a key using crypto key generate rsa**D.** Generate enterprise CA self-sign certificate**Answer: B,C****Explanation:**Here are the steps:  
Configure a hostname for the router using these commands.yourname#configure terminal  
Enter configuration commands, one per line. End with CNTL/Z.yourname (config)#hostname LabRouterLabRouter(config)#Configure a domain name with the ip domain-name command followed by whatever you would like your domainname to be. I used CiscoLab.com.  
LabRouter(config)#ip domain-name CiscoLab.comWe generate a certificate that will be used to encrypt the SSH packets using the crypto key generate rsa command.Take note of the message that is displayed right after we enter this command: "The name for the keys will be: LabRouter.CiscoLab.com" -- it combines the hostname of the router along with the domain name we configured to getthe name of the encryption key generated; this is why it was important for us to, first of all, configure a hostname thena domain name before we generated the keys.**Reference:**
