Once the order finishes, the information about you will be concealed.

NEW QUESTION: 1You have a Hyper-V host named Host1 that connects to a SAN by using a hardware Fibre Channel adapter.Host1 contains two virtual machines named VM1 and VM2.You need to provide VM1 with direct access to the SAN. VM2 must not require access to the SAN. Which two configurations should you perform? (Each correct answer presents part of the solution. Choose two.)**A.** On Host1, configure a new Virtual Fibre Channel SAN.**B.** On Host1, configure a new virtual switch.**C.** On VM1, configure a Fibre Channel adapter.**D.** On Host1, modify the Hyper-V settings.**E.** On VM1, add a network adapter.**Answer: A,C****Explanation:**Step 1: D: Building a Virtual SANThe process of setting up virtual Fibre Channel starts with building a virtual SAN. The easiest way to accomplish this is to open the Hyper-V Manager, right click on the listing for your Hyper-V server in the console tree, and then choose the Virtual SAN Manager command from the shortcut menu. Step 2:A: Once you have created a virtual SAN, the next step in the process is to link a virtual machine to the virtual SAN. To do so, right click on the virtual machine for which you want to provide Fibre Channel connectivity and select the Settings command from the resulting shortcut menu. Next, select the Add Hardware container, as shown in the figure above, and then select the Fibre Channel Adapter option from the list of available hardware. Etc.**Note:*** Virtual Fibre Channel for Hyper-V (also referred to as Synthetic Fibre Channel) provides VM guest operating systems with direct access to a Fibre Channel SAN by using a standard World Wide Name (WWN) associated with a virtual machine

NEW QUESTION: 2You work as an administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com.All servers on the Contoso.com network have Windows Server 2012 installed.You are in the process of installing a Server Core installation of Windows Server 2012 on a new Contoso.com server, named ENSUREPASS-SR13.Which of the

following is TRUE with regards to a installing a Server Core installation of Windows Server 2012? (Choose all that apply.)**A.** Server roles can be configured locally via the command prompt using Windows PowerShell.**B.** The Desktop Experience is not available.**C.** The Server Graphical Shell is installed, but not enabled.**D.** You are able to access the Microsoft Management Console locally.**E.** Server roles can be configured locally via Server Manager.**Answer: A,B**Explanation: ExplanationA. There is no Windows shell and very limited GUI functionality.B. The Server Core interface is a command prompt with PowerShell support.C. Only Remotely using Server Manager.D. Microsoft Management Console is not available locally.E. Desktop Experience is not available.Server Core is a minimal server installation option for computers running on the operating system. Server Core provides a low-maintenance server environment with limited functionality.The minimal nature of Server Core creates limitations:There is no Windows shell and very limited GUI functionality. The Server Core interface is a command prompt with PowerShell support.There is limited MSI support (unattended mode only).Server Graphical Shell is not installed.Microsoft Management Console: not available locally.Desktop Experience: not available.

NEW QUESTION: 3You have an Azure subscription.You need to implement a custom policy that meet the following requirements:*Ensures that each new resource group in the subscription has a tag named organization set to a value of Contoso.*Ensures that resource group can be created from the Azure portal.*Ensures that compliance reports in the Azure portal are accurate.How should you complete the policy? To answer, select the appropriate options in the answers area.**Answer:** Explanation:ExplanationReferences: <https://docs.microsoft.com/en-us/azure/governance/policy/concepts/definition-structure>
