NEW QUESTION: 1Which statement about VXLAN is true?**A.** VXLAN extends the Layer 2 Segment ID field to 24-bits. which allows up to 4094 unique Layer 2 segments over the same network.**B.** VXLAN uses TCP 35 the transport protocol over the physical data cento network**C.** VXLAN encapsulates a Layer 2 frame in an IP-UDP header, which allows Layer 2 adjacency across router boundaries.**D.** VXLAN uses the Spanning Tree Protocol for loop prevention.

Answer: D

NEW QUESTION: 2A common Integration point with Vulnerability is:**A.** Risk Indicators within GRC**B.** Workflow Mappings**C.** Knowledge Base**D.** Service Catalog**Answer: B**

NEW QUESTION: 3When upgrading an existing system from Solaris 11 Express to Oracle Solaris 11, what happens to the datalink names?**A.** They are called eth#.**B.** They are left unnamed, to avoid conflicts, and need to be renamed after the installation process is complete.**C.** They maintain their names.**D.** They are called el00g#.**E.** They follow the default naming convention for the newly installed version.**Answer: E****Explanation:**Explanation/Reference:Explanation: Network configuration in Oracle Solaris 11 includes* Generic datalink name assignment - Generic names are automatically assigned to datalinks using the net0, net1, netN naming convention, depending on the total number of network devices that are on the system**Note:** There is no upgrade path from Oracle Solaris 10 to Oracle Solaris 11. You must perform a fresh installation.

NEW QUESTION: 4While configuring a new access layer switch, the administrator, Joe, was advised that he needed to make sure that only devices authorized to access the network would be permitted to login and utilize resources. Which of the following should the administrator implement to ensure this happens?**A.** 802.1x**B.** VLAN Management**C.** Log Analysis**D.** Network separation**Answer: A****Explanation:**802.1x is a port-based authentication mechanism. It's based on Extensible Authentication Protocol (EAP) and is commonly used in closed-environment wireless networks. 802.1x was initially used to compensate for the weaknesses of Wired Equivalent Privacy (WEP), but today it's often used as a component in more complex authentication and connection-management systems, including Remote Authentication Dial-In User Service (RADIUS),Diameter, Cisco System's Terminal Access Controller Access-Control System Plus (TACACS+), and Network AccessControl (NAC).**Incorrect Answers:**A. Log analysis is the art and science of reviewing audit trails, log files, or other forms of computer-generated records for evidence of policy violations, malicious events, downtimes, bottlenecks, or other issues of concern.B. VLAN management is the use of VLANs to control traffic for security or

performance reasons. C. Bridging between networks can be a desired feature of network design. Network bridging is self-configuring, is inexpensive, maintains collision-domain isolation, is transparent to Layer 3+ protocols, and avoids the 5-4-3 rule's Layer 1 limitations. However, network bridging isn't always desirable. It doesn't limit or divide broadcast domains, doesn't scale well, can cause latency, and can result in loops. In order to eliminate these problems, you can implement network separation or segmentation. There are two means to accomplish this. First, if communication is necessary between network segments, you can implement IP subnets and use routers. Second, you can create physically separate networks that don't need to communicate. This can also be accomplished later using firewalls instead of routers to implement secured filtering and traffic management.
