Conditions for Creating Partitioned Views Include:The select list* All columns in the member tables should be selected in the column list of the view definition.* The columns in the same ordinal position of each select list should be of the same type, including collations. Also, at least one column (for example <col>) must appear in all the select lists in the same ordinal position.This <col> should be defined in a way that the member tables T1, ..., Tn have CHECK constraints C1, ..., Cn defined on <col>, respectively.References:
