What exactly is in your Study Guides, So, more and more people try their best to get NS0-528 exam certification, You can finish your daily task with our NS0-528 study materials more quickly and efficiently.

**NEW QUESTION: 1** Refer to the graphic. R1 is unable to establish an OSPF neighbor relationship with R3. What are possible reasons for this problem? (Choose two.)  
**A.** All of the routers need to be configured for backbone Area 1.  
**B.** R1 and R2 are the DR and BDR, so OSPF will not establish neighbor adjacency with R3.  
**C.** The hello and dead interval timers are not set to the same values on R1 and R3.  
**D.** R1 and R3 are configured in different areas.  
**E.** EIGRP is also configured on these routers with a lower administrative distance.  
**F.** A static route has been configured from R1 to R3 and prevents the neighbor adjacency from being established.  
**Answer: C, D**  
**Explanation:** This question is to examine the conditions for OSPF to create neighborhood. So as to make the two routers become neighbors, each router must be matched with the following items: 1. The area ID and its types; 2. Hello and failure time interval timer; 3. OSPF Password (Optional);

**NEW QUESTION: 2** What can self-healing tools deliver?  
**A.** Automated recovery  
**B.** Automated escalation  
**C.** Automated logging  
**D.** Automated attendant  
**Answer: A**

**NEW QUESTION: 3** You find the following entries in your web log. Each shows attempted access to either root.exe or cmd.exe. What caused this?  
**A.** Ping of Death  
**B.** Code Red  
**C.** Trinoo  
**D.** The PIF virus  
**E.** The Morris worm  
**F.** Nimda  
**Answer: F**  
**Explanation:** The Nimda worm modifies all web content files it finds. As a result, any user browsing web content on the system, whether via the file system or via a web server, may download a copy of the worm. Some browsers may automatically execute the downloaded copy, thereby, infecting the browsing system. The high scanning rate of the Nimda worm may also cause bandwidth denial-of-service conditions on networks with infected machines and allow intruders the ability to execute arbitrary commands within the Local System security context on machines running the unpatched versions of IIS.
