NEW QUESTION: 2A user has configured an HTTPS listener on an ELB. The user has not configured any security policy which can help to negotiate SSL between the client and ELB. What will ELB do in this scenario?**A.** By default ELB will select the first version of the security policy**B.** It is not required to have a security policy since SSL is already installed**C.** By default ELB will select the latest version of the policy**D.** ELB creation will fail without a security policy
Answer: CExplanation:Elastic Load Balancing uses a Secure Socket Layer (SSL) negotiation configuration which is known as a Security Policy. It is used to negotiate the SSL connections between a client and the load balancer. If the user has created an HTTPS/SSL listener without associating any security policy, Elastic Load Balancing will, by default, associate the latest version of the ELBSecurityPolicy-YYYY-MM with the load balancer.
