You will learn happily and efficiently with the help of our Architecting a Citrix Networking Solution study guide, If you remember the key points of study guide, you will pass the 1Y0-440 real exam with hit-rate.

Now you have access to 1800+ real PDF **1Y0-440 Useful Dumps** tests with 100% correct answers verified by IT Certified Professionals.

NEW QUESTION: 1Which statement is one disadvantage of using FSSO NetAPI polling mode over FSSO Security Event Log (WinSecLog) polling mode?**A.** It might miss some logon events.**B.** It requires a DC agent installed in some of the Windows DC.**C.** It requires access to a DNS server for workstation name resolution.**D.** It runs slower.**Answer: A**

NEW QUESTION: 2**HOTSPOT**BackgroundYou manage a Microsoft SQL Server environment that includes the following databases: DB1, DB2, Reporting. The environment also includes SQL Reporting Services (SSRS) and SQL Server Analysis Services (SSAS). All SSRS and SSAS servers use named instances. You configure a firewall rule for SSAS. Databases Database Name: DB1 Notes: This database was migrated from SQL Server 2012 to SQL Server 2016. Thousands of records are inserted into DB1 or updated each second. Inserts are made by many different external applications that your company's developers do not control. You observe that transaction log write latency is a bottleneck in performance. Because of the transient nature of all the data in this database, the business can tolerate some data loss in the event of a server shutdown. Database Name: DB2 Notes: This database was migrated from SQL Server 2012 to SQL Server 2016. Thousands of records are updated or inserted per second. You observe that the WRITELOG wait type is the highest aggregated wait type. Most writes must have no tolerance for data loss in the event of a server shutdown. The business has identified certain write queries where data loss is tolerable in the event of a server shutdown. Database Name: Reporting Notes: You create a SQL Server-authenticated login named BIAppUser on the SQL Server instance to support users of the Reporting database. The BIAppUser login is not a member of the sysadmin role. You plan to configure performance-monitoring alerts for this instance by using SQL Agent Alerts. You need to set up the service accounts that the database engine and SQL Server Agent services will use. How should you design the solution? To answer, select the appropriate configuration options in the answer area. Hot Area:**Answer:** Explanation: Explanation/Reference: Explanation: Box 1: Domain Account The service startup account defines the Microsoft Windows account in which SQL Server Agent runs and its network permissions. SQL Server Agent runs as a specified user account. You select an account for the SQL Server Agent service by using SQL Server Configuration Manager, where you can choose from the following options: * Built-in account. You can choose from a list of the following built-in Windows service accounts: Local System account. * This account. Lets you specify the Windows domain account in which the SQL Server Agent service runs. Box 2: Domain users Microsoft recommends choosing a Windows user account that is not a member of the Windows Administrators group. Box 3: Managed Service Accounts When resources external to the SQL Server computer are needed, Microsoft recommends using a Managed Service Account (MSA), configured with the minimum privileges necessary. Note: A Managed Service Account (MSA) can run services on a computer in a secure and easy to maintain manner, while maintaining the capability to connect to network resources as a specific user principal.
