The result is that you will live a common life forever, But if you are trouble with the difficult of aPHRi exam, you can consider choose aPHRi guide question to improve your knowledge to pass aPHRi exam, which is your testimony of competence.

**NEW QUESTION: 1**What is a NULL scan?**A.** A scan in which certain flags are off**B.** A scan in which the packet size is set to zero**C.** A scan with a illegal packet size**D.** A scan in which all flags are turned off**E.** A scan in which all flags are on**Answer: D****Explanation:**A null scan has all flags turned off.

**NEW QUESTION: 2****A.** DC3**B.** DC2**C.** DC4**D.** DC1**Answer: A**

**NEW QUESTION: 3**You have a Microsoft SQL Server Integration Services (SSIS) package that contains a Data Flow task as shown in the Data Flow exhibit. (Click the Exhibit button.)You install Data Quality Services (DQS) on the same server that hosts SSIS and deploy a knowledge base to manage customer email addresses. You add a DQS Cleansing transform to the Data Flow as shown in the Cleansing exhibit. (Click the Exhibit button.)You create a Conditional Split transform as shown in the Splitter exhibit. (Click the Exhibit button.)You need to split the output of the DQS Cleansing task to obtain only Correct values from the EmailAddress column. For each of the following statements, select Yes if the statement is true. Otherwise, select No.**Answer:** **Explanation:****Explanation**The DQS Cleansing component takes input records, sends them to a DQS server, and gets them back corrected. The component can output not only the corrected data, but also additional columns that may be useful for you. For example - the status columns. There is one status column for each mapped field, and another one that aggregated the status for the whole record. This record status column can be very useful in some scenarios, especially when records are further processed in different ways depending on their status. Is such cases, it is recommended to use a Conditional Split component below the DQS Cleansing component, and configure it to split the records to groups based on the record status (or based on other columns such as specific field status).**References:**
