**NEW QUESTION: 1**A company's website hosted on Amazon EC2 instances processes classified data stored in Amazon S3 Due to security concerns, the company requires a private and secure connection between its EC2 resources and Amazon S3 Which solution meets these requirements?**A.** Set up S3 bucket policies to allow access from a VPC endpoint.**B.** Set up an IAM policy to grant read-write access to the S3 bucket.**C.** Set up a NAT gateway to access resources outside the private subnet.**D.** Set up an access key ID and a secret access key to access the S3 bucket**Answer: A**

**NEW QUESTION: 2**For which feature is the address family "rtfilter" used?**A.** Route Target Constraint**B.** Enhanced Route Refresh**C.** MPLS VPN filtering**D.** Unified MPLS**Answer: A**  
Explanation:With Multiprotocol Label Switching (MPLS) VPN, the internal Border Gateway Protocol (iBGP) peer or Route Reflector (RR) sends all VPN4 and/or VPN6 prefixes to the PE routers. The PE router drops the VPN4/6 prefixes for which there is no importing VRF and forwarding (VRF). This is a behavior where the RR sends VPN4/6 prefixes to the PE router, which it does not need. This is a waste of processing power on the RR and the PE and a waste of bandwidth. With Route Target Constraint (RTC), the RR sends only wanted VPN4/6 prefixes to the PE. 'Wanted' means that the PE has VRF importing the specific prefixes. RFC 4684 specifies Route Target Constraint (RTC). The support is through a new address family rtfilter for both VPNv4 and VPNv6.
