NEW QUESTION: 2 Which of the following will help prevent smurf attacks?
A. Disabling directed broadcast on border routers
B. Disabling unused services on the gateway firewall
C. Allowing necessary UDP packets in and out of the network
D. Flash the BIOS with the latest firmware
Answer: A
Explanation: Section: Threats and Vulnerabilities Explanation/Reference: Explanation: A smurf attack involves sending PING requests to a broadcast address. Therefore, we can prevent smurf attacks by blocking broadcast packets on our external routers. A smurf attack is a type of network security breach in which a network connected to the Internet is swamped with replies to ICMP echo (PING) requests. A smurf attacker sends PING requests to an Internet broadcast address. These are special addresses that broadcast all received messages to the hosts connected to the subnet. Each broadcast address can support up to 255 hosts, so a single PING request can be multiplied 255 times. The return address of the request itself is spoofed to be the address of the attacker's victim. All the hosts receiving the PING request reply to this victim's address instead of the real sender's address. A single attacker sending hundreds or thousands of these PING messages per second can fill the victim's T-1 (or even T-3) line with ping replies, bring the entire Internet service to its knees. Smurfing falls under the general category of Denial of Service attacks -- security attacks that don't try to steal information, but instead attempt to disable a computer or network.

NEW QUESTION: 3 전자 상거래 회사의 솔루션 아키텍트가 애플리케이션 로그 데이터를 Amazon S3에 백업하려고 합니다. 솔루션 아키텍트는 로그에 얼마나 자주 액세스하는지 또는 어떤 로그에 가장 많이 액세스할지 확실하지 않습니다. 적절한 S3 스토리지 클래스. 이러한 요구 사항을 충족하기 위해 어떤 S3 스토리지 클래스를 구현해야 합니까?
A. S3 Standard-Infrequent Access (S3 표준 -IA)
B. S3 지능형 계층
C. S3 빙하
D. S3 One Zone-Infrequent Access (S3 One Zone-IA)
Answer: B
Explanation: S3 Intelligent-Tiering S3 Intelligent-Tiering is a new Amazon S3 storage class designed for customers who want to optimize storage costs automatically when data access patterns change, without performance impact or operational overhead. S3 Intelligent-Tiering is the first cloud object storage class that delivers automatic cost savings by moving data between two access tiers - frequent access and infrequent access - when access patterns change, and is ideal for data with unknown or changing access patterns. S3 Intelligent-Tiering stores objects in two access tiers: one tier that is optimized for frequent access and another lower-cost tier that is

optimized for infrequent access. For a small monthly monitoring and automation fee per object, S3 Intelligent-Tiering monitors access patterns and moves objects that have not been accessed for 30 consecutive days to the infrequent access tier. There are no retrieval fees in S3 Intelligent-Tiering. If an object in the infrequent access tier is accessed later, it is automatically moved back to the frequent access tier. No additional tiering fees apply when objects are moved between access tiers within the S3 Intelligent-Tiering storage class. S3 Intelligent-Tiering is designed for 99.9% availability and 99.999999999% durability, and offers the same low latency and high throughput performance of S3 Standard.
