**NEW QUESTION: 3**Which type of analysis assigns values to scenarios to see what the outcome might be in each scenario?**A.** descriptive**B.** deterministic**C.** exploratory**D.** probabilistic**Answer: B**Explanation:Deterministic Versus Probabilistic AnalysisIn deterministic analysis, all data used for the analysis is known beforehand. Probabilistic analysis, on the other hand, is done assuming the likelihood that something will or has happened, but you don't know exactly when or how.Probabilistic methods institute powerful tools for use in many kinds of decision-making problems-in this case, cybersecurity event analysis. In this type of analysis, the analysis components suggest a "probabilistic answer" to the results of the investigation, which is not a definitive result.Deterministic analysis, you know and obtain "facts" about the incident, breach, affected applications, and so on. For instance, by analyzing applications using port-based analysis and similar methods, you can assume that the process is deterministic-especially when applications conform to the specifications of the standards.
