NEW QUESTION: 3How often should an independent review of the security controls be performed, according to OMB Circular A-130? **A**. Every year **B**. Never **C**. Every three years **D**. Every five years **Answer: C** Explanation: The correct answer is "Every three years". OMB Circular A-130 requires that a review of the security controls for each major government application be performed at least every three years. For general support systems, OMB Circular A-130 requires that the security controls be reviewed either by an independent audit or self review. Audits can be self-administered or independent (either internal or external). The essential difference between a self-audit and an independent audit is objectivity; however, some systems may require a fully independent review. NEW QUESTION: 4A user is running a batch process on EBS backed EC2 instances. The batch process starts a few instances to process hadoop Map reduce jobs which can run between 50 - 600 minutes or sometimes for more time. The user wants to configure that the instance gets terminated only when the process is completed. How can the user configure this with CloudWatch? **A**. It is not possible to terminate instances automatically **B**. Setup the CloudWatch action to terminate the instance when the CPU utilization is less than 5% **C**. Setup a job which terminates all instances after 600 minutes **D**. Setup the CloudWatch with Auto Scaling to terminate all the instances **Answer: A** Explanation: Explanation Amazon CloudWatch alarm watches a single metric over a time period that the user specifies and performs one or more actions based on the value of the metric relative to a given threshold over a number of time periods. The user can setup an action which terminates the instances when their CPU

utilization is below a certain threshold for a certain period of time. The EC2 action can either terminate or stop the instance as part of the EC2 action.
