**Answer: C**

**NEW QUESTION: 2**Your network contains two Active Directory forests named adatum.com and contoso.com. The network contains three servers. The servers are configured as shown in the following table.You need to ensure that connection requests from adatum.com users are forwarded to Server2 and connection requests from contoso.com users are forwarded to Server3.Which two should you configure in the connection request policies on Admin1? (Each correct answer presents part of the solution. Choose two.)**A.** The User Name condition**B.** The Authentication settings**C.** The Identity Type condition**D.** The Location Groups condition**E.** The Standard RADIUS Attributes settings**Answer: A,B****Explanation:**C. he User Name attribute group contains the User Name attribute. By using this attribute, you can designate the user name, or a portion of the user name, that must match the user name supplied by the access client in the RADIUS message. This attribute is a character string that typically contains a realm name and a user account name. You can use pattern-matching syntax to specify user names.E. By using this setting, you can override the authentication settings that are configured in all network policies and you can designate the authentication methods and types that are required to connect to your network. Forward requests to the following remote RADIUS server group . By using this setting, NPS forwards connection requests to the remote RADIUS server group that you specify. If the NPS server receives a valid Access-Accept message that corresponds to the Access-Request message, the connection attempt is considered authenticated and authorized. In this case, the NPS server acts as a RADIUS proxy.
