NEW QUESTION: 1Which type of firewall can be used to track connectionless protocols such as UDP and RPC?
A. Application level firewalls
B. Stateful inspection firewalls
C. Circuit level firewalls
D. Packet filtering firewalls
Answer: B
Explanation: Packets in a stateful inspection firewall are queued and then analyzed at all OSI layers, providing a more complete inspection of the data. By examining the state and context of the incoming data packets, it helps to track the protocols that are considered "connectionless", such as UDP-based applications and Remote Procedure Calls (RPC).
