For Linux-based instances, you can also install patches for non-security updates. You can patch fleets of Amazon EC2 instances or your on-premises servers and virtual machines (VMs) by operating system type. This includes supported versions of Windows, Ubuntu Server, Red Hat Enterprise Linux (RHEL), SUSE Linux Enterprise Server (SLES), and Amazon Linux. You can scan instances to see only a report of missing patches, or you can scan and automatically install all missing patches.Option A is invalid because Amazon QuickSight and Cloud Trail cannot be used to generate the list of servers that don't meet compliance needs.Option C is wrong because deploying instances via new AMI'S would impact the applications hosted on these servers Option D is invalid because Amazon Trusted Advisor cannot be used to generate the list of servers that don't meet compliance needs.For more information on the AWS Patch Manager, please visit the below URL:
