certificate at the first attempt.

Our SC-100 guide torrent can simulate the exam and boosts the timing function, With the help of our SC-100 study material during the year, I assure that you will stand out in the crowd.

We are proud of our SC-100 actual questions that can be helpful for users and make users feel excellent value, For candidates who need to practice the SC-100 exam dumps for the exam, know the new changes of the exam center is quite necessary, it will provide you the references for the exam.

With SC-100 study materials, you will have more flexible learning time, If you fail the exam with SC-100 exam bootcamp unfortunately, all refund will be return as compensation to your loss.

Our experts have distilled the crucial points of the exam into our SC-100 study materials by integrating all useful content into them, While, how to master the professional **Exam SC-100 Consultant** skill about Microsoft Cybersecurity Architect exam certification is a question to all the IT candidates.

So choosing our SC-100 training materials is a wise choice, So what else do you need most, Because it contains all the questions of Microsoft SC-100 examination.

Free Demo Dispels your Purchasing Misgivings, And you can find the comments and feedbacks on our website to see that how popular and excellent our SC-100 study materials are.

NEW QUESTION: 1 Now there are four network segments 10.24.0.0/24, 10.24.1.0/24, 10.24.2.0/24, 10.24.3.0/24. Which of the following network segments can be summarized? (Multiple choice) **A.** 10.24.0.0/23 **B.** 10.24.0.0/21 **C.** 10.24.0.0/22 **D.** 10.24.1.0/23 **Answer: B,C**

NEW QUESTION: 2 Your network contains a server named WDS1 that has the Windows Deployment Services (WDS) server role installed. WDS1 is used to deploy Windows 7. You create a virtual hard disk (VHD) file that contains an installation of Windows Server 2008 R2 Service Pack 1 (SP1). From the Windows Deployment Services console, you attempt to add the VHD file, and you receive the error message shown in the exhibit. (Click the Exhibit button.) You need to ensure that you can deploy the VHD file by using WDS. What should you do? Exhibit: **A.** Run wdsutil.exe and specify the /add-image parameter. **B.** Run imagex.exe and specify the /append parameter. **C.** Run wdsutil.exe and specify the update-serverfiles parameter. **D.** Run imagex.exe and specify the /apply parameter. **Answer: A** Explanation: To add a virtual hard disk image to the server 1. Click Start, right-click Command Prompt, and then click Run as administrator. 2. You must create an image group because .vhd images cannot be in image groups with .wim images. To create an image group for the .vhd image, use the following syntax: WDSUTIL /Add-ImageGroup /ImageGroup:<image group name>. Example: WDSUTIL /Add-ImageGroup /ImageGroup:'VHD Image Group' 3. To add the .vhd image to the server, use the following syntax (at a minimum): WDSUTIL /Verbose /Progress /Add-Image /ImageFile:<path> /ImageType:Install /ImageGroup:<image group name>. For differencing disks, the path to the image should be to the .vhd file of the differencing disk and not to the parent disk. Adding the differencing .vhd will add the parent .vhd file to the server, but only the differencing disk will be active (the parent .vhd will be inactive). If the differencing disk is part of chain, choose the last .vhd in the chain. In that case, the immediate parent .vhd and all preceding parent .vhd files in the chain will also be added. Full syntax: WDSUTIL /add-Image /ImageFile:<.vhd file path> [/Server:<server name>] /ImageType:install [/ImageGroup:<image group name>] [/Filename:<new image file name>] [/UnattendFile:<full path to unattendfile>] Example: WDSUTIL /Verbose /Progress /Add-Image /ImageFile:'C:\vhd\WindowsServer2008R2.vhd' /Server:MyWDS Server /ImageType:Install /ImageGroup:'VHD Image Group' 4. Repeat step 3 until

you have added all of your .vhd images.5.If you want to update the description for an image, use the following steps:a.Run WDSUTIL /Get-ImageGroup /ImageGroup:<image group name> and note the name that the server assigned to the image. To display the full image metadata on each image in the group, append /Detailed.Example: WDSUTIL /Get-ImageGroup /ImageGroup:'VHD Image Group'b.To update the description for an image, use the following syntax where <image name> is the name you noted in the previous step: WDSUTIL /Set-Image /Image:<image name> /ImageType:Install /ImageGroup:<image group name> /Description:<description>.Example: WDSUTIL /Set-Image /Image:'VHD image' /ImageType:Install /ImageGroup:'VHD Image Group' /Description:'VHD image for R2' Source: [http://technet.microsoft.com/en-us/library/dd363560\(WS.10\).aspx](http://technet.microsoft.com/en-us/library/dd363560(WS.10).aspx)

NEW QUESTION: 3 Refer to the exhibit. Which statement about the displayed ACI Fabric is true?
A. The number of user-defined tenants is 26
B. The capacity information shown is typical of multipod deployments
C. Integrated Layer 4 Layer 7 services are not in use
D. This fabric is configured for VMM integration
E. Too many endpoints are connected to nodes 121 and 122

Answer: A
