**NEW QUESTION: 2** You are creating an add-in project for Microsoft Office by using Visual Studio Tools for the Microsoft Office System (VSTO). You create a data source named ContactRef from a class in an assembly. The author digitally signs a new version of the assembly. You need to ensure that the add-in can load a new version of the assembly. What should you do?**A.** Add the public key token to the TypeInfo element in the ContactRef.datasource file.**B.** Add a PublicKeyToken attribute to the ContactRef.datasource file.**C.** Add the public key token to the GenericObjectDataSource element in the ContactRef.datasource file.**D.** Add a PublicKeyToken element to the ContactRef.datasource file.**Answer: A**

**NEW QUESTION: 3** You work as a senior administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com. All servers on the Contoso.com network have Windows Server 2012 R2 installed. You are running a training exercise for junior administrators. You are currently discussing connection security rules. Which of the following is TRUE with regards to connection security rules? (Choose all that apply.)**A.** Connection security rules are applied to programs or services.**B.** Connection security rules allows for traffic to be secured via IPsec.**C.** Connection security rules are applied between two computers.**D.** Connection security rules do not allow the traffic through the firewall.**Answer: B,C,D**  
**Explanation:** Connection security involves the authentication of two computers before they begin communications and the securing of information sent between two computers. Windows Firewall with Advanced Security uses Internet Protocol security (IPsec) to achieve connection security by using key exchange, authentication, data integrity, and, optionally, data encryption. How firewall rules and connection security rules are related Firewall rules allow traffic through

the firewall, but do not secure that traffic. To secure traffic with IPsec, you can create Computer Connection Security rules. However, the creation of a connection security rule does not allow the traffic through the firewall. You must create a firewall rule to do this, if the traffic is not allowed by the default behavior of the firewall. Connection security rules are not applied to programs or services; they are applied between the computers that make up the two endpoints.

**NEW QUESTION: 4** Which of the following Kerberos components holds all users' and services' cryptographic keys?  
**A.** The Key Distribution Center  
**B.** The Key Distribution Service  
**C.** The Authentication Service  
**D.** The Key Granting Service  
**Answer: A**  
**Explanation:**  
Explanation/Reference: The Key Distribution Center (KDC) holds all users' and services' cryptographic keys. It provides authentication services, as well as key distribution functionality. The Authentication Service is the part of the KDC that authenticates a principal. The Key Distribution Service and Key Granting Service are distracters and are not defined Kerberos components.
