NEW QUESTION: 4 Refer to the exhibit. Routers A and B are directly connected and running EIGRP, but they are unable to form a neighbor relationship. What is the most likely cause?
Cisco 350-001 Exam
A. The autonomous system is misconfigured.
B. The IP address statements are misconfigured.
C. The network statements are misconfigured.
D. There is a physical issue with the cable.
Answer: B
Explanation: To form neighbor relationship in EIGRP, these conditions must be met:
1. Pass the authentication process
2. Have the same configured AS number
3. Must believe that the source IP address of a received Hello is in that router's primary connected subnet on that interface
4. Match K values
The third item means that the primary ip address of the neighbor must be in the same subnet with the primary ip address of the received interface. But in this case the primary ip address of router A is 10.10.10.1/30 and it is not in the same subnet with the primary ip address of router B 10.10.10.6/30 -> no EIGRP neighbor relationship is formed.
