And we treat those comments with serious attitude and never stop the pace of making our Oracle 1z0-1052-22 practice materials do better.

NEW QUESTION: 1PGP, SSL, and IKE are all examples of which type of cryptography?**A.** Digest **B.** Secret Key**C.** Public Key**D.** Hash Algorithm**Answer: C****Explanation:**Explanation/Reference: Public-key algorithms are fundamental security ingredients in cryptosystems, applications and protocols.They underpin various Internet standards, such as Secure Sockets Layer (SSL),Transport Layer Security (TLS), S/MIME, PGP, Internet Key Exchange (IKE or IKEv2), and GPG.References: https://en.wikipedia.org/wiki/Public-key_cryptography

NEW QUESTION: 2ABC Corp., and have recently returned from a training course on Check Point's new advanced R80 management platform. You are presenting an in-house R80 Management to the other administrators in ABC Corp.How will you describe the new "Publish" button in R80 Management Console?**A.** The Publish button takes any changes an administrator has made in their management session and publishes a copy to the Check Point Cloud of R80 and but does not save it to the R80**B.** The Publish button makes any changes an administrator has made in their management session visible to all other administrator sessions and saves it to the Database.**C.** The Publish button makes any changes an administrator has made in their management session visible to the new Unified Policy session and saves it to the Database.**D.** The Publish button takes any changes an administrator has made in their management session, publishes a copy to the Check Point of R80, and then saves it to the R80 database.**Answer: B****Explanation:**Explanation/Reference:Explanation: To make your changes available to other administrators, and to save the database before installing a policy, you must publish the session. When you publish a session, a new database version is created.Reference: https://sc1.checkpoint.com/documents/R80/CP_R80_SecMGMT/html_frameset.htm?topic=documents/R80/CP_R80_SecMGMT/126197

NEW QUESTION: 3**A.** Option E**B.** Option B**C.** Option D**D.** Option C**E.** Option A**Answer: A****Explanation:**ExplanationIncident management (IM) is a necessary part of a security program. When effective, it mitigates business impact, identifies weaknesses in controls, and helps fine-tune response processes.In this question, an attack has been identified and confirmed. When a server is compromised or used to commit a crime, it is often necessary to seize it for forensics analysis. Security teams often face two challenges when trying to remove a physical server from service: retention of potential evidence in volatile storage or removal of a device from a critical business process.Evidence retention is a problem when the investigator wants to retain RAM content. For example, removing power from a server starts the process of mitigating business impact, but it also denies forensic analysis of data, processes, keys, and possible footprints left by an attacker.A full a bit level image, including RAM should be taken of one or

more of the Linux servers. In many cases, if your environment has been deliberately attacked, you may want to take legal action against the perpetrators. In order to preserve this option, you should gather evidence that can be used against them, even if a decision is ultimately made not to pursue such action. It is extremely important to back up the compromised systems as soon as possible. Back up the systems prior to performing any actions that could affect data integrity on the original media.
