Answer: B

NEW QUESTION: 3Refer to the exhibit.A customer has two Cisco Unified Communication manager 9.X clusters that serve the same location. An engineer has attempted to set up Enhanced Location call admission control so that any call within a site between phones on the two clusters do not decrement the available bandwidth to and from that site. However, the real time monitoring tool currently shows bandwidth being used from the site to Hub_none. When a call is placed between phones at the site, which action must be taken to correct this situation?
A. The SIP trunks should be changed to use the shadow location.
B. The Hub_none location must have a link configured to the shadow location.
C. The hub_none location must have a link configuration to the phantom location.
D. The device pool names must match between clusters.
E. The link between clusters must be a type of inter-cluster trunk instead of a sip trunk.
Answer: A
Explanation:ExplanationShadow is a new system location created for intercluster Enhanced

Location CAC. In order to pass location information across clusters, the SIP ICT needs to be assigned to the system location Shadow. The system location Shadow: * Is a valid location only for a SIP ICT. Devices other than SIP trunks assigned incorrectly to the Shadow location are treated as if assigned to the Hub_None location. * Cannot have a link connecting to other user defined locations, so bandwidth cannot be deducted between the Shadow location and other user defined locations. * Has no intra-location bandwidth capacities, so bandwidth cannot be deducted within the Shadow location.
