NEW QUESTION: 3You manage a Microsoft SQL Server instance named SQL1 that has 32 gigabytes (GB) of total memory.The instance supports an app named App1 that only uses a single thread. App1 frequently queries the database using the same index. The operating system and App1 combined require 8 GB of memory to function.You need to ensure that the SQL Server does not limit the performance of App1.What configuration option should you set?**A.** max worker threads to 1**B.** min memory per query to 4 GB**C.** index create memory to 16 GB**D.** max server memory to 16 GB**Answer: C**Explanation:The index creates memory option controls the maximum amount of memory initially allocated for sort operations when creating indexes. The default value for this option is 0 (self-configuring). If more memory is later needed for index creation and the memory is available, the server will use it; thereby, exceeding the setting of this option. If additional memory is not available, the index creation will continue using the memory already allocated.References:
