NEW QUESTION: 4 You are configuring Wireshark on a Cisco Catalyst 4500E Switch with a Supervisor 8. Which three actions can you take to prevent the capture from overloading the CPU? (Choose three.) **A.** Attach the specific ports that are part of the data path. **B.** Configure a policy map, class map, and an access list to express the match conditions. **C.** Reconfigure the buffers to accommodate the additional traffic. **D.** Use an appropriate ACL. **E.** Use an in-line filter. **F.** Add memory to the Supervisor. **Answer: A,D,E** Explanation: Because packet forwarding typically occurs in hardware, packets are not copied to the CPU for software processing. For Wireshark packet capture, packets are copied and delivered to the CPU, which causes an increase in CPU usage. To avoid high CPU, do the following: - Attach only relevant ports. - Use a class map, and secondarily, an access list to express match conditions. If neither is viable, use an explicit, in-line filter. - Adhere closely to the filter rules. Restrict the traffic type (such as, IPv4 only) with a restrictive, rather than relaxed ACL, which elicits unwanted traffic.
