NEW QUESTION: 3 Refer to the exhibit. If a port is configured as shown and receives an untagged frame, of which VLAN will the untagged frame be a member?
A. VLAN 2 B. VLAN 3 C. VLAN 1 D. VLAN 4
Answer: A
Explanation: When typing: Switch(config-if)#switchport mode ?
access Set trunking mode to ACCESS unconditionally dynamic Set trunking mode to dynamically negotiate access or trunk mode trunk Set trunking mode to TRUNK unconditionally and Switch(config-if)#switchport mode dynamic ? auto Set trunking mode dynamic negotiation parameter to AUTO desirable Set trunking mode dynamic negotiation parameter to DESIRABLE
So if we configure Fa0/1 as dynamic auto mode, it will not initiate any negotiation but waiting for the other end negotiate to be a trunk with DTP. If the other end does not ask it to become a trunk then it will become an access port. Therefore when using the "show interface fastEthernet0/1 switchport" command we will see two output lines "Administrative Mode: dynamic auto" and "Operational Mode: static access"
Not E. To set this port to VLAN 2 as the output above just use one additional command. "switchport access vlan 2".
Now back to our question, from the output we see that Fa0/1 is operating as an access port on VLAN 2 so if it receive untagged frame it will suppose that frame is coming from VLAN 2.
