Determine the ISTG Role Owner for a Site
The Intersite Topology Generator (ISTG) is the domain controller in each site that is responsible for generating the intersite topology. If you want to regenerate the intersite topology, you must determine the identity of the ISTG role owner in a site. You can use this procedure to view the NTDS Site Settings object properties and determine the ISTG role owner for the site.
To determine the ISTG role owner for a site
1. Open Active Directory Sites and Services.
2. In the console tree, click the site object whose ISTG role owner you want to determine.
3. In the details pane, right-click the NTDS Site Settings object, and then click Properties. The current role owner appears in the Server box under Inter-Site Topology Generator.
