NEW QUESTION: 1An organization has recently grown through acquisitions Two of the purchased companies use the same IP CIDR range There is a new short-time requirement to allow AnyCompany A (VPCA) to communicate with a server that has the IP address 10.0.0.77 m AnyCompany B (VPC B) AnyCompany A must also communicate with all resources in AnyCompany C (VPC-C) The Network team has created the VPC peer links but it is having issues with communications between VPC-A and VPC H After an investigation the team believes that the routing tables in the VPCs are incorrect.What configuration will allow AnyCompany A to communicate with AnyCompany C in addition to the database in AnyCompany B?A)B)C)D)A. Option DB. Option CC. Option AD. Option B**Answer: A**

NEW QUESTION: 2You are developing an app that manages users for a video game. You plan to store the region, email address, and phone number for the player. Some players may not have a phone number. The player's region will be used to load-balance data.Data for the app must be stored in Azure Table Storage.You need to develop code to retrieve data for an individual player.How should you complete the code? To answer, select the appropriate options in the answer area.**NOTE:** Each correct selection is worth one point.**Answer:** Explanation:Explanation: Box 1: regionThe player's region will be used to load-balance data.Choosing the PartitionKey. The core of any table's design is based on its scalability, the queries used to access it, and storage operation requirements. The PartitionKey values you choose will dictate how a table will be partitioned and the type of queries that can be used. Storage operations, in particular inserts, can also affect your choice of PartitionKey values.Box 2: emailNot phone number some players may not have a phone number.Box 3: CloudTableBox 4 : TableOperation query =..Box 5: TableResultReferences:

NEW QUESTION: 3What is a feature that enables VPN connections to successfully maintain a private and secure VPN session without employing Stateful Inspection?A. VPN Routing ModeB. Wire ModeC. Stateful ModeD. Stateless Mode**Answer: B**Explanation:Wire Mode is a VPN-1 NGX feature that enables VPN connections to successfully fail over, bypassing Security Gateway enforcement. This improves performance and reduces downtime. Based on a trusted source and destination, Wire Mode uses internal interfaces and VPN Communities to maintain a private and secure VPN session, without employing Stateful Inspection. Since Stateful Inspection no longer takes place, dynamicrouting protocols that do not survive state verification in non-Wire Mode configurations can now be deployed.The VPN connection is no different from any other connections along a dedicated wire, thus the meaning of "Wire Mode".
