NEW QUESTION: 2 An application stores data in an Amazon RDS database instance. Automated RDS snapshots are taken during specified backup windows every night. In addition, a SysOps Administrator takes monthly manual RDS snapshots. During a maintenance window, the RDS instance was accidentally deleted. How can the Administrator restore the RDS database instance? **A.** Restore the instance from the last full RDS snapshot and subsequent incremental snapshots **B.** Restore the instance from the last available manual snapshot. **C.** Restore the instance from the last available automated snapshot. **D.** Restore the instance from the RDS in the secondary Availability Zone **Answer: C** **Explanation:** Explanation Creating a Final Snapshot and Retaining Automated Backups When you delete a DB instance, you can choose whether to create a final snapshot of the DB instance. You can also choose to retain automated backups after the DB instance is deleted. To be able to restore the DB instance at a later time, create a final snapshot or retain automated backups. With Final Snapshot Without Final Snapshot Retain Automated Backups How to choose To be able to restore your deleted DB instance at a later time, create a final DB snapshot. To delete a DB instance quickly, you can skip creating a final DB snapshot. Important If you skip the snapshot, to restore your DB instance you need one of the following: * You have to use an earlier manual snapshot of the DB instance to restore the DB instance to that snapshot's point in time. * You have to choose to retain automated backups; you can use those to restore it to any point in time* within your retention period. Instead of creating a snapshot, you can choose to enable Retain automated backups when you delete a DB instance. These backups are still subject to the retention period of the DB instance and age out the same way systems snapshots do. Automated backups All automated backups are deleted and can't be recovered, unless you enable Retain automated backups. All automated

backups are deleted and can't be recovered, unless you choose to retain automated backups when you delete the DB instance. Automated backups are retained for a set period of time, regardless of whether you chose to create a final snapshot. They are retained for retention period that was set on the DB instance at the time you deleted it. Manual snapshots Earlier manual snapshots aren't deleted. Earlier manual snapshots aren't deleted. No snapshots are deleted. You can't create a final snapshot of your DB instance if it has the status creating, failed, incompatible-restore, or incompatible-network. For more information about DB instance statuses, see DB Instance Status.
