NEW QUESTION: 1 Compare a typical Distributed Replicated Block Device (DRBD) with MySQL Standard Replication using master-slave replication. Which two statements are correct? **A.** Both technologies guarantee an identical copy of data on the secondary node. **B.** Both technologies use the TCP/IP stack as their primary transmission medium. **C.** Only MySQL can maintain a time-delayed copy of data on the secondary node. **D.** DRBD uses shared-disk technology.

Answer: B, C Explanation: **A:** * Replication cannot use Unix socket files. You must be able to connect to the master MySQL server using TCP/IP. **D:** Time Delayed replication is however something quite helpful for some environments. Though DRBD also could be extended to support one if needed. **Not B:** DRBD (Distributed Replication Block Device), one of the leading solutions for MySQL HA (High Availability), offering users: / An end-to-end, integrated stack of mature and proven open source technologies, fully supported by Oracle; / Automatic failover and recovery for service continuity; / Mirroring, via synchronous replication, to ensure failover between nodes without the risk of losing committed transactions; / Building of HA clusters from commodity hardware, without the requirement for shared-storage.

NEW QUESTION: 2 A customer has configured SnapDrive for Windows to assist in creating Snapshot copies of a LUN. In SnapDrive, the transport protocol configuration uses the vsadmin user account for authentication. SnapDrive fails to connect to the SVM. Why did this failure occur? **A.** Transport protocol requires a domain Windows account. **B.** SnapDrive requires a cluster-wide privileged account. **C.** Transport protocol requires a local Windows account. **D.** The vsadmin account is locked or does not have a password. **Answer: D**
