NEW QUESTION: 1You have configured the Enable Keep Alive check box under Trace Filter Settings. How does this change the trace output?**A.** It adds TCP socket numbers between the endpoint and Cisco Unified CallManager for the session.**B.** It adds the SCCP messages and all fields sent as part of that message.**C.** It adds the IP address of the endpoint in hex.**D.** It maps the unique TCP handle for the endpoint to the MAC address of the endpoint in the trace output.
Answer: B Explanation: Enable Keep Alive Trace Activates trace for keepalive trace information in the Cisco CallManager traces. Because each SCCP device reports keepalive messages every 30 seconds, and each keepalive message creates 3 lines of trace data.

NEW QUESTION: 2You are a Dynamics 365 for Customer Services administrator. You have a Production instance and Sandbox instance. Users record Production instance data in the Sandbox instance. You need to ensure that users only record data in the Production instance. Which security function needs to be edited to prevent access to the Sandbox? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation: Microsoft 365 admin center -> Groups

NEW QUESTION: 3Case Study 5 - Wide World Importers Background Wide World Importers is moving all their data centers to Azure. The company has developed several applications and services to support supply chain operations and would like to leverage serverless computing where possible. Current environment Windows Server 2016 virtual machine This virtual machine (VM) runs Biz Talk Server 2016. The VM runs the following workflows: * Ocean Transport - This workflow gathers and validates container information including container contents and arrival notices at various shipping ports. * Inland Transport - This workflow gathers and validates trucking information including fuel usage, number of stops, and routes. The VM supports the following REST API calls: * Container API - This API provides container information including weight, contents, and other attributes. * Location API - This API provides location information regarding shipping ports of call and truck stops. * Shipping REST API - This API provides shipping information for use and display on the shipping website. Shipping Data The application uses MongoDB JSON document storage database for all container and transport information. Shipping Web Site The site displays shipping container tracking information and container

contents. The site is located at <http://shipping.wideworldimporters.com> Proposed solution The on-premises shipping application must be moved to Azure. The VM has been migrated to a new Standard_D16s_v3 Azure VM by using Azure Site Recovery and must remain running in Azure to complete the BizTalk component migrations. You create a Standard_D16s_v3 Azure VM to host BizTalk Server. The Azure architecture diagram for the proposed solution is shown below:

Shipping Logic App The Shipping Logic app must meet the following requirements:

- * Support the ocean transport and inland transport workflows by using a Logic App.
- * Support industry-standard protocol X12 message format for various messages including vessel content details and arrival notices.
- * Secure resources to the corporate VNet and use dedicated storage resources with a fixed costing model.
- * Maintain on-premises connectivity to support legacy applications and final BizTalk migrations.

Shipping Function app Implement secure function endpoints by using app-level security and include Azure Active Directory (Azure AD). REST APIs The REST API's that support the solution must meet the following requirements:

- * Secure resources to the corporate VNet.
- * Allow deployment to a testing location within Azure while not incurring additional costs.
- * Automatically scale to double capacity during peak shipping times while not causing application downtime.
- * Minimize costs when selecting an Azure payment model.

Shipping data Data migration from on-premises to Azure must minimize costs and downtime. Shipping website Use Azure Content Delivery Network (CDN) and ensure maximum performance for dynamic content while minimizing latency and costs. Issues Windows Server 2016 VM The VM shows high network latency, jitter, and high CPU utilization. The VM is critical and has not been backed up in the past. The VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure. Shipping website and REST APIs The following error message displays while you are testing the website: You need to migrate on-premises shipping data to Azure. What should you use?

A. AzCopy **B.** Azure Database Migration service **C.** Azure Migrate **D.** Azure Cosmos DB Data Migration tool (dt.exe) **Answer: B**

Explanation: Migrate from on-premises or cloud implementations of MongoDB to Azure Cosmos DB with minimal downtime by using Azure Database Migration Service. Perform resilient migrations of MongoDB data at scale and with high reliability. Scenario: Data migration from on-premises to Azure must minimize costs and downtime. The application uses MongoDB JSON document storage database for all container and transport information. NEW QUESTION: 4 You have a distributed application that periodically processes large volumes of data across multiple Amazon EC2 Instances. The application is designed to recover gracefully from Amazon EC2 instance failures. You are required to accomplish this task in the most cost-effective way. Which of the following will meet your requirements?

A. Reserved instances **B.** Dedicated instances **C.** On-Demand instances **D.** Spot Instances **Answer: C**
