If you really want to pass the AZ-120 exam, you should choose our first-class AZ-120 study materials.

**NEW QUESTION: 1**Can an IP phone be configured so that calls to that IP phone can be rerouted if the IP phone become unregistered?**A.** No. if a phone is unregistered, the re-order tone is played to the caller**B.** Yes. configuring Call Forward Busy Internal provides this coverage**C.** No. the call is dropped at the gateway**D.** Yes. configuring Call Forward Unregistered provides this coverage**E.** Yes. configuring call forward All provides this coverage**Answer: D****Explanation:**Call Forward UnregisteredThe Call Forward Unregistered (CFU) feature allows you to forward a call to a different number if the directory number (DN) is not associated with a phone or if the associated phone is not registered to Cisco Unified CME. The CFU feature is very useful for wireless phone users when the wireless phone is out of the access point or phone shuts down automatically because of an automatic shutdown feature. The service is not available and the call can be forwarded to the CFU destination. Any unregistered or floating DN can be forwarded using the CFU feature.An unregistered DN indicates that none of its associated phones are registered to the Cisco Unified CME. A registered phone will become unregistered when the Cisco Unified CME sends an unregistration request or responses to a phone's unregistration request. Cisco Unified CME sends an unregistration request under the following circumstances:  
-When the keepalive timer expires.-When a user issues a reset or restart command on the phone.-When an extension mobility (EM) user logs into the phone. (All DNs configured under the logout-profile are unregistered except for the shared ones that are associated with other registered phones.)-When an EM user logs out of the phone. (All DNs configured under the user-profile are unregistered except for the shared ones that are associated with other registered phones.)There is always a gap between the time the phone loses its connection with Cisco Unified CME and the time when Cisco Unified CME claims the phone is unregistered. The length of the gap depends on the keepalive timer. Cisco Unified CME considers the phone as registered and tries to associate DNs until the keepalive timer expires. You can configure the

expiration for the keepalive timer using the registrar server expires max <seconds> min <seconds> command under sip in voice service voip mode for SIP IP phones. For more information, see the, "Configuring Keepalive Timer Expiration in SIP Phones: Example" section. Cisco Unified CME 8.6 supports the CFU feature on SIP IP phones using the call-forward b2bua unregistered command under voice register dn tag. The CFU feature supports overlap dialing and en-bloc dialing. A call to a floating DN is forwarded to its CFU destination, if configured. Calls to a DN out of service point or phones losing connection are not forwarded to a CFU number until the phone becomes unregistered. For more information on configuring call-forward unregistered, see the "Configuring Call Forward Unregistered for SIP IP Phones: Example" section. Note: In earlier versions of Cisco Unified CME, a busy tone was played for callers when the callers are unable to reach the SCCP phone number. In Cisco Unified CME 8.6 and later versions, a fast busy tone is played instead of a busy tone for callers who are unable to reach the phone.
