NEW QUESTION: 1The optimum cost point for total life cycle costs occurs:Response:**A.** When acquisition costs plus ongoing costs are minimized.**B.** When operations and maintenance costs are minimized.**C.** When manufacturing and development costs are minimized.**D.** When reliability program expenditures are maximized.**Answer: A**

NEW QUESTION: 2Which of the following is a best practice when handling the embedded battery from MacBook Air models'?**A.** Hold the battery carefully by its edges only with two hands.**B.** Re-cover any punctures or tears in the soft Mylar covering with Kapton tape**C.** Grasp the middle of the battery cells when removing it from the computer.**D.** Use the battery cable or connector to lift the battery.**Answer: D**

NEW QUESTION: 3You plan to deploy an Azure web app named App1 that will use Azure Active Directory (Azure AD) authentication.App1 will be accessed from the internet by the users at your company. All the users have computers that run Windows 10 and are joined to Azure AD. You need to recommend a solution to ensure that the users can connect to App1 without being prompted for authentication and can access App1 only from company-owned computers.What should you recommend for each requirement? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation: Box 1: An Azure AD app registrationAzure active directory (AD) provides cloud based directory and identity management services.You can use azure AD to manage users of your application and authenticate access to your applications using azure active directory.You register your application with Azure active directory tenant.Box 2: A conditional access policyConditional Access policies at their simplest are if-then statements, if a user wants to access a resource, then they must complete an action.By using Conditional Access policies, you can apply the right access controls when needed to keep your organization secure and stay out of your user's way when not needed.Reference:

NEW QUESTION: 4You use a desktop computer that has Windows 7 Ultimate SP1. The relevant portions of the computerconfiguration are shown in the following exhibits:* The Disk Management console (Click the Exhibit button.)* The System Properties window (Click the Exhibit button.)* The System protection for Local Disk C window (Click the Exhibit button.)You encrypt several files on an external USB hard disk drive by using the Encrypting File System (EFS).You need to ensure that you can access the files from another computer.What should you do?Disk Management (exhibit):System Properties (exhibit):System protection (exhibit):**A.** Run the cipher /x command from the elevated command prompt,**B.** Search for the file in the Recycle Bin.**C.** Create a restore point.**D.** Set restore settings to Only restore previous versions of files.**E.**

Increase disk space used for system protection.**F.** Run the compact /U <file_name> command from the elevated command prompt.**G.** Perform a system restore.**H.** Delete restore points.**I.** Run the vssadmin list shadows command from the elevated command prompt,**J.** Run the vssadmin list volumes command from the elevated command prompt.**K.** Copy the file from a previous version of a folder.**Answer: A**Explanation:* cipher /x[:efsfile] [<FileName>]Backs up the EFS certificate and keys to the specified file name. If used with :efsfile, /x backs up the user's certificate(s) that were used to encrypt the file. Otherwise, the user's current EFS certificate and keys are backed up.* Back Up Your EFS Key The first time that you use EFS to encrypt something, your system generates a random 256-bit number; that's the key that EFS uses whenever you encrypt something. To back up your EFS key, simply use the Cipher /x command. Cipher will reply with a message asking if you truly want to back up your EFS key-sadly, I haven't found a way to suppress this message. Press OK. The tool will then prompt you for the name of the file in which to store the backup. Don't specify a file extension; Cipher insists on the .pfx extension. For example, if you picked a file named mybackup, you now have a small file called mybackup.pfx. Next, the tool will prompt you to create a password with which to protect that file.Once you've got that file created, copy it from your computer's hard disk to some offline location (e.g., a USB stick, a CD-ROM) and make a note of the password you've chosen. Now, in the event of unfortunate circumstances-- for example, you lose your profile, you forget your password and a systems administrator has to reset it, the system's OS fails and you need to recover files directly from the nowdead system's hard disk--you can simply restore your EFS key by double-clicking the .pfx file and running the resulting wizard. As soon as the wizard is finished, you'll be able to get to your files again.
