NEW QUESTION: 1You have an Azure Linux virtual machine that is protected by Azure Backup. One week ago, two files were deleted from the virtual machine.You need to restore the deleted files to an on-premises computer as quickly as possible.Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:Explanation:To restore files or folders from the recovery point, go to the virtual machine and choose the desired recovery point.Step 0. In the virtual machine's menu, click Backup to open the Backup dashboard.Step 1. In the Backup dashboard menu, click File Recovery.Step 2. From the Select recovery point drop-down menu, select the recovery point that holds the files you want. By default, the latest recovery point is already selected.Step 3: To download the software used to copy files from the recovery point, click Download Executable (for Windows Azure VM) or Download Script (for Linux Azure VM, a python script is generated).Step 4: Copy the files by using AzCopyAzCopy is a command-line utility designed for copying data to/from Microsoft Azure Blob, File, and Table storage, using simple commands designed for optimal performance. You can copy data between a file system and a storage account, or between storage accounts.References:
