The clients can use the shortest time to prepare the exam and the learning [Salesforce Certified B2C Commerce Architect](#) only costs 20-30 hours, Efficient exam content, In fact, we never stop to put efforts to strengthen our humanized service level.

You can fully trust us, If you treat our B2C-Commerce-Architect Dumps PDF seriously and pay more attention on it, you have no excuse to fail exam, You are lucky to have used our Salesforce B2C-Commerce-Architect exam bootcamp materials, because our product has all of the above merits.

Well, you are in the right place.

**NEW QUESTION: 1** In non-discretionary access control using Role Based Access Control (RBAC), a central authority determines what subjects can have access to certain objects based on the organizational security policy. The access controls may be based on:  
**A.** The individual's role in the organization  
**B.** The group-dynamics as they relate to the master-slave role in the organization  
**C.** The group-dynamics as they relate to the individual's role in the organization  
**D.** The societies role in the organization  
**Answer: A**  
**Explanation:** In Non-Discretionary Access Control, when Role Based Access Control is being used, a central authority determines what subjects can have access to certain objects based on the organizational security policy. The access controls may be based on the individual's role in the organization.

**NEW QUESTION: 2** On Cisco Nexus 1000v Switch, you can allow the VSM and VEM to communicate over IP for control and packet traffic. Before you create a port profile for Layer 3 control, which two statements must be verified? (Choose two)  
**A.** All VEMs belong to the same Layer 2 domain.  
**B.** Only one port profile can be configured with the capability Layer 3 control command.  
**C.** Different hosts should belong to the same VLANs for Layer 3 control.  
**D.** The port profile must be a trunk port profile.  
**E.** The transport mode for the VSM domain should be configured as Layer 3.  
**Answer: B,E**

**NEW QUESTION: 3** **A.** Option B **B.** Option C **C.** Option D **D.** Option A  
**Answer: C**  
**Explanation:** IP Routing Table Entry Types  
An entry in the IP routing table contains the following information in the order presented:  
Network ID. The network ID or destination corresponding to the route. The network ID can be class-based, subnet, or supernet network ID, or an IP address for a host route.  
Network Mask. The mask that is used to match a destination IP address to the network ID.  
Next Hop. The IP address of the next hop.  
Interface. An indication of which network interface is used to forward the IP packet.  
Metric. A number used to indicate the cost of the route so the best route among possible multiple routes to the same destination can be selected. A common use of the metric is to indicate the number of hops (routers crossed) to the network ID.  
Routing table entries can be used to store the following types of routes:  
Directly Attached Network IDs. Routes for network IDs that are directly attached. For directly attached networks, the Next Hop field can be blank or contain the IP address of the interface on that network.  
Remote Network IDs. Routes for network IDs that are not directly attached but are available across other routers. For remote networks, the Next Hop field is the IP address of a local router in between the forwarding node and the remote network.  
Host Routes. A route to a specific IP address. Host routes allow routing to occur on a per-IP address basis. For host routes, the network ID is the IP

address of the specified host and the network mask is 255.255.255.255.Default Route. The default route is designed to be used when a more specific network ID or host route is not found. The default route network ID is 0.0.0.0 with the network mask of 0.0.0.0.

**NEW QUESTION: 4** Identify the two valid EPM Workspace features that designers incorporate into Books to enable viewers perform tasks.**A.** Email inks**B.** XML, HTML & PDF**C.** Related Content**D.** Prompt**E.** User POV**Answer: D,E****Explanation:**A: Some reports are designed with prompts, which are displayed when you view the reports or books containing the reports. You respond to prompts and provide requested information by selecting members from prompt lists. You can edit prompts manually. If prompts contain alias names, you convert them to member names.B: Dimensions often contain members that you may never access. Setting up the user POV enables you to create a choices list for any dimension in a specified data source, where only the members in the choices list are displayed when the dimension is accessed from the user POV. When a report is added to a book, the dimensions that are on the user POV in the report definitions are applied to the book POV. Members on the book POV default to the user POV in the Book Editor.**Note:** Books are created, edited, and saved in EPM Workspace.**Reference:** Oracle Hyperion Financial Reporting, User's Guide, Setting Up the User POV for Financial Reporting Documents
