NEW QUESTION: 1You are the lead software developer for your company. You are using Microsoft Visual Studio 2012 and Test Driven Development to create a new commercial software product. Management asks you to define unit testing standards that all developers will follow. You need to design the first unit test for a new class. What should you design the first unit test to do initially?
A. test exceptional cases
B. test a range of values
C. pass the base case
D. fail the base case
Answer: D
Explanation: You create the first test to fail the base case. Then based on the results of the failure, you implement the code to achieve a pass.

NEW QUESTION: 3Users complain that system performance is unacceptable when using a specific application service running on a multiprocessor service. You have established from the storage team that disk response times have not increased, so you can discount there being an I/O problem. You run vmstat to look at CPU activity and notice high average disk times on the multiprocessor system and an average run queue of zero. You require more detail about each CPU from which the vmstat figures are derived, to investigate if the load is distributed evenly across all CPUs. Which three commands provide more detailed information about CPU load distribution?
A. sar
B. mpstat
C. iostat -x
D. top
E. vmstat
Answer: A,B,E
Explanation: C: A useful command to get CPU related stats is mpstat. Here is an example output:
mpstat -P ALL 5 2
Linux 2.6.9-67.ELsmp (oraclerc1) 12/20/2008 10:42:38 PM CPU %user %nice %system %iowait

```
%irq %soft %idle intr/s10:42:43PM all 6.89 0.00 44.76 0.10 0.10 0.10 48.05 1121.6010:42:43PM 0

708.40 etc.D: When called, the grand-daddy of all memory and process related displays, vmstat,
continuously runs and posts its information. It takes two arguments:# vmstat <interval>
<count> <interval> is the interval in seconds between two runs. <count> is the number of
repetitions vmstat makes. Here is a sample when we want vmstat to run every five seconds and
stop after the tenth run. Every line in the output comes after five seconds and shows the stats
at that time.# vmstat 5 10 procs -----memory----- ---swap-- -----io---- --system--
-----cpu----r b swpd free buff cache si so bi bo in cs us sy id wa 0 0 1087032 132500 15260 622488

1087032 132484 15300 622448 0 0 317 79 1088 905 1 0 98 0 ... shows up to 10 times. The output
shows a lot about the system resources.E: sar stands for System Activity Recorder, which
records the metrics of the keycomponents of the Linux system-CPU, Memory, Disks, Network,
etc.-in a special place:the directory /var/log/sa.The simplest way to use sar is to use it without
any arguments or options. Here is anexample:# sar Linux 2.6.9-55.0.9.ELlargesmp (prolin3)
