NEW QUESTION: 1Somebody has inadvertently configured several security policies with application firewall rule sets on an SRX device. These security policies are now dropping traffic that should be allowed. You must find and remove the application firewall rule sets that are associated with these policies. Which two commands allow you to view these associations? (Choose two.)**A.** show security policies application-firewall**B.** show services application-identification application-system-cache**C.** show security application-firewall rule-set all**D.** show security policies**Answer: A,D**Explanation:Explanation/Reference:Reference: http://www.juniper.net/techpubs/en_US/junos12.1/topics/example/application-firewall-configuring.html

NEW QUESTION: 2HOTSPOTYou develop a microservice solution for a company. The solution uses the Actor design pattern for all services including mappings, GPS, and communication. The mapping and communication systems must persist state on disk. The GPS system must persist state in-memory. All Actors must have a service replica count of three. You need to implement code for the GPS system. How should you complete the code segment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation:Example: The state manager retrieval methods return a reference to an object in local memory. Modifying this object in local memory alone does not cause it to be saved durably. When an object is retrieved from the state manager and modified, it must be reinserted into the state manager to be saved durably.

```
[StatePersistence(StatePersistence.Persisted)]class MyActor : Actor, IMyActor{public MyActor(ActorService actorService, ActorId actorId)base(actorService, actorId){}public Task SetCountAsync(int value){return this.StateManager.SetStateAsync<int>("MyState", value);}}
```

NEW QUESTION: 3A Development team is working on a serverless application in AWS. To quickly identify and remediate potential production issues, the team decides to roll out changes to a small number of users as a test before the full release. The DevOps Engineer must develop a solution to minimize downtime and impact. Which of the following solutions should be used to meet the requirements? (Select TWO.)**A.** Create an Application Load Balancer with two target groups. Set up the Application Load Balancer for Amazon API Gateway private integration. Associate one target group to the current version and the other target group to the new version. Configure API Gateway to route 10% of incoming traffic to the new version. As the new version becomes stable, configure API Gateway to send all traffic to the new version and detach the old version from the load balancer.**B.** Create an ELB Network Load Balancer with two target groups. Set up the Network Load Balancer for Amazon API Gateway private integration. Associate one target group with the current version and the other target group with the new version. Configure the load balancer to route 10% of incoming traffic to the new version. As the new version becomes stable, detach the old version from the load balancer.**C.** Create an alias for an AWS Lambda function pointing to both the current and new versions.

Configure the alias to route 10% of incoming traffic to the new version. As the new version is considered stable, update the alias to route all traffic to the new version.**D.** In Amazon API Gateway, create a canary release deployment by adding canary settings to the stage of a regular deployment. Configure API Gateway to route 10% of the incoming traffic to the canary release. As the canary release is considered stable, promote it to a production release.**E.** Create a failover record set in AWS Route 53 pointing to the AWS Lambda endpoints for the old and new versions. Configure Route 53 to route 10% of incoming traffic to the new version. As the new version becomes stable, update the DNS record to route all traffic to the new version.
