NEW QUESTION: 1When attempting to log in as administrator to the UI, the administrator receives a login error:Invalid Username/Password or Disabled AccountThe DBA verifies the account is enabled. The information provided for the environment only includes the DLP protect database username and password as well as a username and password called Sys AdminAdmin.How should the administrator change the built-in 'Administrator' password?**A.** use the AdminPasswordReset utility to update the password**B.** log in to the Enforce UI as the Sys Admin account and go to System > Login Management > DLP Users and reset the administrator password**C.** extract the administrator password from the DatabasePassword.properties file**D.** update the PasswordEnforcement.properties file with a new administrator password**Answer: A**Explanation:Explanation/Reference:Explanation:

NEW QUESTION: 2How can a customer increase security to AWS account logons? (Select TWO)**A.** Configure AWS Certificate Manager**B.** Use Amazon Cognito to manage access**C.** Enable AWS Organizations**D.** Configure a strong password policy**E.** Enable Multi-Factor Authentication (MFA)**Answer: D,E**

NEW QUESTION: 3Fill in the blank: RADIUS Accounting gets _____ data from requests generated by the accounting client**A.** Location**B.** Payload**C.** Identity**D.** Destination**Answer: C**Explanation:How RADIUS Accounting Works with Identity AwarenessRADIUS Accounting gets identity data from RADIUS Accounting Requests generated by the RADIUS accounting client.

NEW QUESTION: 4TCP/IP stack fingerprinting is the passive collection of configuration attributes from a remote device during standard layer 4 network communications. The combination of parameters may then be used to infer the remote operating system (OS fingerprinting), or incorporated into a device fingerprint. Which of the following Nmap switches can be used to perform TCP/IP stack fingerprinting?**A.** nmap -sT**B.** nmap -sS**C.** nmap -O -p**D.** nmap -sU -p**Answer: C**Explanation:The nmap -O -p switch can be used to perform TCP/IP stack fingerprinting. Nmap is a free open-source utility for network exploration and security auditing. It is used to discover computers and services on a computer network, thus creating a "map" of the network. Just like many simple port scanners, Nmap is capable of discovering passive services. In addition, Nmap may be able to determine various details about the remote computers. These include operating system, device type, uptime, software product used to run a service, exact version number of that product, presence of some firewall techniques and, on a local area network, even vendor of the remote network card. Nmap runs on Linux, Microsoft Windows etc.**Answer B** is incorrect. The nmap -sU -p switch can be used to perform UDP port scanning. **Answer A** is incorrect. The nmap -sS switch is used to perform a TCP half scan. TCP SYN scanning is also known as half-open scanning because in this a full TCP connection is never

opened. Answer D is incorrect. The nmap -sT switch is used to perform a TCP full scan.
