**NEW QUESTION: 1**A telecommunications company has a substantial amount of data. This data is being created by network elements within their environment. The company wants to change the way the network element's Call Detail Records (CDR) are stored and analyzed. The existing infrastructure consolidates all of the CDRs into a table structure, and then ingests them into a large database. Once ingested, a query engine accesses the database and performs analysis on these files. The system is functional; however, since the amount of CDRs generated will increase exponentially over the next year, the company is open to alternatives for storing and analyzing these records. In evaluating alternatives, the key requirements are to reduce cost, the amount of storage, and the amount of time to analyze the data. The customer would like to use Hadoop to analyze the CDRs. After you have conducted an assessment of the workflow, you have recommended an Isilon Cluster to work within the Hadoop environment. Which protocols would be the best fit when using Isilon for this customer's Hadoop workflow?**A. NFS and HDFS B. SyncIQ and HTTP C. CIFS and FTP D. NDMP and SCP****Answer: A**

**NEW QUESTION: 3** A company prepares a flexible budget each month for manufacturing costs. Formulas have been developed for all costs within a relevant range of 5,000 to 15,000 units per month. The budget for electricity (a semi variable cost) is US \$19,800 at 9,000 units per month, and US \$21,000 at 10,000 units per month. How much should be budgeted for electricity for the coming month if 12,000 units are to be produced? **A.** US \$23,400 **B.** US \$25,200 **C.** US \$26,400 **D.** US \$22,200 **Answer: A** Explanation: A flexible budget consists of a fixed cost component and a variable cost component. The fixed cost component can be expected to remain constant throughout the budget's relevant range. The variable cost component, however, will change at a constant rate within the budget's range. The increase in budgeted cost of US \$1,200 (\$21,000 - \$19,800) per 1,000 units of production can therefore be calculated as the variable cost per unit of US \$1.20 [(\$21,000 - \$19,800) / (10,000 - 9,000)] and the total fixed costs of US \$9,000 [\$19,800 - (9,000 x \$1.20)]. These costs can then be used to determine the total cost of using 12,000 units of electricity [US \$9,000 FC + 12,000 x \$1.20].
