And we always consider your interest and **Reliable Google-Workspace-Administrator Test Tutorial** condition to the first place, Therefore, you can use in a safe environment.

NEW QUESTION: 1 Which two functions are performed by the DR in OSPF? (Choose two.)
A. The DR originates the network LSA on behalf of the network.
B. The DR forms adjacencies with all other OSPF routers on the network, in order to synchronize the LSDB across the adjacencies.
C. The DR is responsible for the flooding throughout one OSPF area.
D. The DR is responsible for originating the type 4 LSAs into one area.
Answer: A, B
Explanation: The DR originates the network LSA (LSA Type 2) which lists all the routers on the segment it is adjacent to -> A is correct. Types 2 are flooded within its area only; does not cross ABR -> B is incorrect. The broadcast and non-broadcast network types elect a DR/BDR. They form adjacencies to all other OSPF routers on the network and help synchronize the Link State Database (LSDB) across the adjacencies -> C is correct. LSAs Type 4 are originated by the ABR to describe an ASBR to routers in other areas so that routers in other areas know how to get to external routes through that ASBR -> D is incorrect.

NEW QUESTION: 2 When selling against competition, which of the following focus on the iDataPlex value proposition?
A. Easy maintenance through individual hot-swappable nodes
B. Standard rack mounting
C. Large selection of proven applications
D. Flexible configurations ready for integration and testing at the customer's data center
Answer: A

NEW QUESTION: 3 Which of the following provides a static record of all certificates that are no longer valid?
A. Recovery agent
B. CRLs
C. Private key
D. CA
Answer: B
