NEW QUESTION: 2ソリューションアーキテクトは、Amazon S3のデータを暗号化するソリューションを設計する必要があります。企業ポリシーでは、オンプレミスで暗号化キーを生成および管理することを義務付けています。アーキテクトは、セキュリティ要件を満たすためにどのソリューションを使用する必要がありますか？**A.** AWS CloudHSM**B.**

SSE-S3：Amazonが管理するマスターキーを使用したサーバー側の暗号化**C.** SSE-KMS：AWS KMS管理キーを使用したサーバー側の暗号化**D.**

SSE-C：顧客提供の暗号化キーを使用したサーバー側の暗号化**Answer: D****Explanation:**Explanation Protecting Data Using Server-Side Encryption with AWS KMS-Managed Keys (SSE-KMS) Server-side encryption is about protecting data at rest. AWS Key Management Service (AWS KMS) is a service that combines secure, highly available hardware and software to provide a key management system scaled for the cloud. AWS KMS uses customer master keys (CMKs) to encrypt your Amazon S3 objects. You use AWS KMS via the Encryption Keys section in the IAM console or via AWS KMS APIs to centrally create encryption keys, define the policies that control how keys can be used, and audit key usage to prove they are being used correctly. You can use these keys to protect your data in Amazon S3 buckets. The first time you add an SSE-KMS-encrypted object to a bucket in a region, a default CMK is created for you automatically. This key is used for SSE-KMS encryption unless you select a CMK that you created separately using AWS Key Management Service. Creating your own CMK gives you more flexibility, including the ability to create, rotate, disable, and define access controls, and to audit the encryption keys used to protect your data.
