SAP C-THR83-2305 exam pdf torrent is the certification training material that guarantees 100% sail through the test at the first attempt.

NEW QUESTION: 1 If a NIC does not have a link light, there is a failure at which of the following OSI layers? **A. Data link B. Physical C. Session D. Presentation** **Answer: B**

NEW QUESTION: 2 パスワードの保護に使用される暗号化の形式はどれですか? **A. asymmetric cryptography B. elliptical curve Diffie-Hellman cryptography C. hash cryptography D. two factor cryptography** **Answer: C**

NEW QUESTION: 3 Which three statements about RSTP are true? (Choose three.) **A. RSTP provides a faster transition to the forwarding state on point-to-point links than STP does. B. RSTP expands the STP port roles by adding the alternate and backup roles. C. RSTP port states are blocking, discarding, learning, or forwarding. D. RSTP significantly reduces topology reconverging time after a link failure. E. RSTP also uses the STP proposal-agreement sequence. F. RSTP uses the same timer-based process as STP on point-to-point links.** **Answer: A,B,D**
Explanation: One big disadvantage of STP is the low convergence which is very important in switched network. To overcome this problem, in 2001, the IEEE with document 802.1w introduced an evolution of the Spanning Tree Protocol: Rapid Spanning Tree Protocol (RSTP), which significantly reduces the convergence time after a topology change occurs in the network. While STP can take 30 to 50 seconds to transit from a blocking state to a forwarding state, RSTP is typically able to respond less than 10 seconds of a physical link failure. RSTP works by adding an alternative port and a backup port compared to STP. These ports are allowed to immediately enter the forwarding state rather than passively wait for the network to converge. RSTP bridge port roles: *Root port - A forwarding port that is the closest to the root bridge in terms of path cost *Designated port - A forwarding port for every LAN segment *Alternate port - A best alternate path to the root bridge. This path is different than using the root port. The alternative port moves to the forwarding state if there is a failure on the designated port for the segment. *Backup port - A backup/redundant path to a segment where another bridge port already connects. The backup port applies only when a single switch has two links to the same segment (collision domain). To have two links to the same collision domain, the switch must be attached to a hub. *Disabled port - Not strictly part of STP, a network administrator can manually disable a port.

NEW QUESTION: 4 Refer to the exhibit. A customer is planning to deploy a branch office server

rackWhat should you change in your configuration to ensure it meets the customer requirements?**A.** Change the 10GbE Optical ports to Fibre Channel.**B.** Change the controller to an HF20H.**C.** Change the controller to an AF20.**D.** Change the 10GbE Optical ports to 10BaseT.

Answer: A
