NEW QUESTION: 1 The Purchase order request form should allow the user to select multiple items from a list of items. The item list is retrieved from the inventory database which changes very frequently. Which of the following options would you consider using to display the list? (Choose One) **A.** A List-to-List Control which is responsive **B.** A custom control to allow multiple selection **C.** A Dropdown control **D.** A repeating grid **Answer: A** Explanation:

Explanation/Reference: Use a list-to-list field to allow a user to make multiple selections from a drop-down list. For example, a meeting may involve a dozen people from a department that has 100 employees. Note: You can also use MultiSelectList OOTB (out of the box) control to select multiple values, and then populate the values of the second list based on the selected values from clipboard. NEW QUESTION: 2 Joe Wellworth, an oil analyst with Smith, Kleen and Beetchnutty institutional brokerage, is trying to determine an appropriate earnings multiplier for the natural gas industry. In his research, Mr. Wellworth has examined the relationship between the earnings multiplier of the natural gas industry and the Price-to- Earnings ratio of the Standard & Poors 500. Using a time series analysis, Joe examines the trend in the relationship between the natural gas industry and the overall market and uses this information to estimate the appropriate earnings multiplier for the natural gas industry. Which of the following best characterizes this method of estimating the earnings multiplier of an industry? Choose the best answer. **A.** Time series analysis **B.** Microanalysis **C.** Correlation analysis **D.** The bottom-up approach **E.** Macroanalysis **Answer: E** Explanation: Explanation/Reference: Explanation: The answer called for in this example is macroanalysis. This method involves an examination of the relationship between the earnings multiplier of a stock market series and the earnings multiplier of the overall market. For example, an individual projecting an earnings multiplier for a software index using macroanalysis would begin by examining the relationship between the P/E ratio of the software index and the P/E ratio of a broad market index such as the Standard & Poors 500. Both historical trends and point estimates would be examined, and from this information, a projection of the earnings multiplier for the stock market series is deduced. This is precisely the process illustrated in this example. This is contrasted by microanalysis, which involves an examination of the components of the earnings multiplier, including the anticipated growth rate of dividends, the required rate of return, and the dividend payout ratio. Once these variables have been examined, both from the perspective of trend analysis and

point estimation, a value for the earnings multiplier is deduced. The bottom-up approach is used in the investment selection process, and involves identifying superior investments by first examining companies, rather than beginning with an examination of macroeconomic cycles and influence. Time series analysis, while materially correct, does not represent the best possible answer.
