**NEW QUESTION: 2**In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso.com has the following configuration: You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment. Solution: You raise the forest functional level to Windows Server 2012 R2. Does this meet the goal? **A.** No **B.** Yes **Answer: B**

**NEW QUESTION: 3**You are the project manager of your enterprise. While performing risk management, you are given a task to identify where your enterprise stands in certain practice and also to suggest the priorities for improvements. Which of the following models would you use to accomplish this task? **A.** Fishbone model **B.** Decision tree model **C.** Capability maturity model **D.** Simulation tree model **Answer: C** Explanation: Explanation/Reference: Explanation: Capability maturity models are the models that are used by the enterprise to rate itself in terms of the least mature level (having nonexistent or unstructured processes) to the most mature (having adopted and optimized the use of good practices). The levels within a capability

maturity model are designed to allow an enterprise to identify descriptions of its current and possible future states. In general, the purpose is to: Identify, where enterprises are in relation to certain activities or practices. Suggest how to set priorities for improvements. Incorrect Answers: D: There is no such model exists in risk management process. B: Decision tree analysis is a risk analysis tool that can help the project manager in determining the best risk response. The tool can be used to measure probability, impact, and risk exposure and how the selected risk response can affect the probability and/or impact of the selected risk event. It helps to form a balanced image of the risks and opportunities connected with each possible course of action. This makes them mostly useful for choosing between different strategies, projects, or investment opportunities particularly when the resources are limited. A decision tree is a decision support tool that uses a tree-like graph or model of decisions and their possible consequences, including chance event outcomes, resource costs, and utility. C: Fishbone diagrams or Ishikawa diagrams shows the relationships between the causes and effects of problems.
