NEW QUESTION: 2 Which two options are mandatory components of a multiprotocol BGP VPN-IPv4 address? (Choose two.)**A.** a system ID**B.** an area ID**C.** a route target**D.** an IPv4 address**E.** an MPLS label**F.** a route distinguisher**Answer: D, F****Explanation:** The IP prefix is a member of the IPv4 address family. After the PE device learns the IP prefix, the PE converts it into a VPN-IPv4 prefix by combining it with an 8-byte route distinguisher (RD). The generated prefix is a member of the VPN-IPv4 address family. It uniquely identifies the customer address, even if the customer site is using globally nonunique (unregistered private) IP addresses. The route distinguisher used to generate the VPN-IPv4 prefix is specified by a configuration command associated with the virtual routing and forwarding (VRF) instance on the PE device. NEW QUESTION: 4 Which of the following processes addresses the risks by their priorities, schedules the project management plan as required, and inserts resources and activities into the budget?**A.** Monitor and Control Risk**B.** Explanation: The plan risk response project management process aims to reduce the threats to the project objectives and to increase opportunities. It follows the perform qualitative risk analysis process and perform quantitative risk analysis process. Plan risk response process includes the risk response owner to take the job for each agreed-to and funded risk response. This process addresses the risks by their priorities, schedules the project management plan as required, and inserts resources and activities into the budget. The inputs to the plan risk response process are as follows: Risk register Risk management plan**C.** Identify Risks**D.** Plan risk response**E.** Qualitative Risk Analysis**F.** is incorrect. Identify Risks is the process of determining which risks may affect the project. It also documents risks' characteristics. The Identify Risks process is part of the Project Risk Management knowledge area. As new risks may evolve or become known as the project progresses through its life cycle, Identify Risks is an iterative process. The process should involve the project team so that they can develop and maintain a sense of ownership and responsibility for the risks and associated risk response actions. Risk Register is the only output of this process. **Answer: A** is incorrect. Monitor and Control Risk is the process of implementing

risk response plans, tracking identified risks, monitoring residual risk, identifying new risks, and evaluating risk process effectiveness throughout the project. It can involve choosing alternative strategies, executing a contingency or fallback plan, taking corrective action, and modifying the project management plan. **Answer: D** Explanation: is incorrect. Qualitative analysis is the definition of risk factors in terms of high/medium/low or a numeric scale (1 to 10). Hence it determines the nature of risk on a relative scale. Some of the qualitative methods of risk analysis are: Scenario analysis- This is a forward-looking process that can reflect risk for a given point in time. Risk Control Self-assessment (RCSA) - RCSA is used by enterprises (like banks) for the identification and evaluation of operational risk exposure. It is a logical first step and assumes that business owners and managers are closest to the issues and have the most expertise as to the source of the risk. RCSA is a constructive process in compelling business owners to contemplate, and then explain, the issues at hand with the added benefit of increasing their accountability.
