NEW QUESTION: 1 It is possible to restrict the time of day, or day of week that a change process can occur.**A. TRUE B. FALSE Answer: A**

NEW QUESTION: 2 Drag the security feature on the left to the specific security risks they help protect against on the right. (Not all options are used.) Select and Place:**Answer:** Explanation:

NEW QUESTION: 3 Scenario: A Citrix Architect needs to design a single-Site XenApp and XenDesktop environment. Through earlier design discussions, the architect has determined the environment details listed in the Exhibit. Click the Exhibit button to view the details. Which SQL server baseline specifications will provide acceptable performance and stability while avoiding unnecessary over-provisioning of resources?**A. 4 CPU cores, 8 GB of RAM, 10 GB database storage B. 8 CPU cores, 16 GB of RAM, 100 GB database storage C. 8 CPU cores, 16 GB of RAM, 10 GB database storage D. 4 CPU cores, 8 GB of RAM, 100 GB database storage E. 2 CPU cores, 4 GB of RAM, 10 GB database storage F. 2 CPU cores, 4 GB of RAM, 100 GB database storage Answer: D**
Explanation:

<https://docs.citrix.com/en-us/xenapp-and-xendesktop/7-15-ltsr/downloads/handbook-715-ltsr.pdf> XenApp and XenDesktop Brokers use the database as a message bus for broker communications, storing configuration data and storing monitoring and configuration log data. The databases are constantly in use and the performance impact on the SQL server can be considered as high. Based on results from Citrix internal scalability testing the following SQL server specification for a server hosting all XenDesktop databases are recommended: 2 Cores / 4 GB RAM for environments up to 5,000 users 4 Cores / 8 GB RAM for environments up to 15,000 users 8 Cores / 16 GB RAM for environments with 15,000+ users

NEW QUESTION: 4 You are designing a routed access layer for a high availability campus network that will be deployed using only Cisco devices. Which of the following are most likely to result in fast and deterministic recovery when a path to a destination becomes invalid? (Choose two.)**A. redundant equal-cost paths to the destination B. a single path to the destination C. EIGRP D. RIPv2 E. OSPF F. redundant unequal-cost paths to the destination Answer: A, C**

Explanation: Explanation/Reference: Section: Addressing and Routing Protocols in an Existing Network Explanation: Of the available choices, Enhanced Interior Gateway Routing Protocol (EIGRP) and redundant equal-cost paths to the destination are most likely to result in fast and deterministic recovery when a path to a destination becomes invalid. Both Open Shortest Path First (OSPF) and the Cisco-developed EIGRP are dynamic routing protocols and

are capable of fast convergence. However, on a network that contains only Cisco routers, EIGRP is typically simpler to deploy than OSPF and can converge faster than OSPF because of the feasible successors stored in the EIGRP topology database. One means of optimizing a routing design is to create redundant equal-cost paths between devices because such a design promotes fast and deterministic recovery when a path becomes invalid. When either EIGRP or OSPF has a redundant equal-cost path to a destination, all of the new path calculation occurs on the local device if one of the paths becomes unavailable. If the device has no redundant equal-cost paths, the routing protocol must rely on information from neighboring devices and calculate a new path. Routing Information Protocol (RIP) does not offer fast recovery. RIP sends out routing updates every 30 seconds, so convergence is relatively slow. In addition, RIP relies on hold-down timers, which further slowdown convergence time. The amount of time required for a routing protocol to detect the loss of a forwarding path and to calculate a new best path can both affect convergence time. In addition, the amount of time it takes for the Cisco Express Forwarding (CEF) table to populate with routing updates can affect the speed of convergence. It is therefore important when designing a network to ensure that the routing design is an optimized design.
