NEW QUESTION: 1You are creating a budget for an organization. The organization requires that allocations be performed automatically as part of budget planning. You need to invoke allocations at a specific budget planning stage. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:ExplanationReferences: <https://docs.microsoft.com/en-us/dynamics365/unified-operations/financials/budgeting/budget-planning-data-allo>

NEW QUESTION: 2Is this a statement that should be discussed with an Enterprise customer who wants to implement a software defined storage infrastructure either on VMware vSAN or Microsoft Storage Spaces Direct? Possible Answer = vSAN is embedded in the hypervisor, Storage Spaces Direct has to be installed separately.**A. Yes B. No Answer: A**

NEW QUESTION: 3When configuring a wireless access point, Zach, a network administrator, needs to determine the MAC address of a local printer. Which of the following commands would be MOST helpful in determining the MAC address?**A. ping B. arp C. route D. dig Answer: B** Explanation:Explanation/Reference:Explanation:

NEW QUESTION: 4Which of the following intrusion detection systems (IDS) monitors network traffic and compares it against an established baseline?**A. Network-based B. Anomaly-based C. Signature-based D. File-based Answer: B** Explanation:Explanation/Reference:Explanation: The anomaly-based intrusion detection system (IDS) monitors network traffic and compares it against an established baseline. This type of IDS monitors traffic and system activity for unusual behavior based on statistics. In order to identify a malicious activity, it learns normal behavior from the baseline. The anomaly-based intrusion detection is also known as behavior-based or statistical-based intrusion detection. Answer D is incorrect. Signature-based IDS uses a database with signatures to identify possible attacks and malicious activity. Answer B is incorrect. A network-based IDS can be a dedicated hardware appliance, or an application running on a computer, attached to the network. It monitors all traffic in a network or traffic coming through an entry-point such as an Internet connection. Answer: A is incorrect. There is no such intrusion detection system (IDS) that is file-based.
