ELBはどのサブネットにあってもいけません。代わりに、インターネットに直接接続する必要があります。**Answer: A**Explanation:The Amazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. Within this virtual private cloud, the user can launch AWS resources, such as an ELB, and EC2 instances. There are two ELBs available with VPC:internet facing and internal (private) ELB. For internet facing ELB it is required that ELB should be in a public subnet.After the user creates the public subnet, he should ensure to associate the route table of the public subnet with the internet gateway to enable the load balancer in the subnet to connect with the internet.
